

A

B

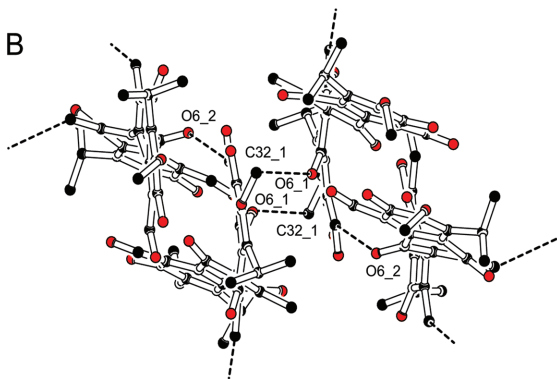

Fig. S1. (A) Dimer pair formed between molecule 1 of x, y, z and molecule 2 of asymmetric unit $-x+1, -y+1, -z+1$. The association is supported by a weak interaction between the C27_1—H27_1 group and the O6_2 atom. (B) Pairs of these dimer units further associate through an additional pair of weak hydrogen bond interactions between the C32_1—H32A_1 group and the O6_1 atom of the asymmetric unit $-x+2, -y+1, -z+1$. Hydrogen atoms are removed for clarity.
