Acta Crystallographica Section B Structural Science, **Crystal Engineering** and Materials ISSN 0108-7681 Editors: Alexander J. Blake and Sander van Smaalen Crystal structures of sodium sulfate decahydrate (Glauber's salt) and sodium tetraborate decahydrate (borax). Redetermination by neutron diffraction H. A. Levy and G. C. Lisensky This electronic document was scanned from an archival copy of material deposited to accompany a paper published in an IUCr journal. In many cases the only accessible copy was a microfilm of a poor-quality original.

- Table S1. Observed and calculated structure factor squares for sodium sulfate decanydrate. The columns headed OBS. CALC and SIG list respectively observed and calculated values of F<sup>2</sup> and the standard error in the observed value, all in units of 10<sup>-25</sup> cm<sup>2</sup>, for the reflection with indices hand k as listed in the subheading and £ in the column headed L. The observed values have been scaled to the calculated values and corrected for extinction.
- Table S2. Observed and calculated structure factor squares for sodium tetraborate decahydrate. The columns headed OBS, CALC and SIG are as described for Table S1. The column headed EXT contains 1000 (1-y), where y is the factor by which the observed squared structure factor was divided to yield the extinction-corrected  $F_0^2$  value listed.
- Table S3. Site-occupancy factors, atomic coordinates and temperature factor coefficients for sodium sulfate decahydrate. The form of the temperature factor is  $\exp-\left[2\pi^2(U_{11}a_1^{*2} + \cdots + 2U_{12}a_1^{*a_2}^*hk + \cdots)\right]$  with  $a_1^* = 0.091331$ ,  $a_2^* = 0.096510$ ,  $a_3^* = 0.081798$  A<sup>-1</sup> for anisotropic atoms, or  $\exp-\left[8\pi^2U_{11}(\sin\theta/\lambda)^2\right]$  for isotropic atoms (those with no entries for  $U_{22}$  to  $U_{23}$  inclusive).
- Table S4. Atomic coordinates and anisotropic temperature factor coefficients for sodium tetraborate decahydrate. For definitions, see Table S3.  $a_1^* = 0.087811$ ,  $a_2^* = 0.093862$ ,  $a_3^* = 0.085497$  A<sup>-1</sup>.
