

IUCr Electronic Archive - #GR2088 Manuscript

Fig. 1. Distribution of anisotropy, as output by the program *PARVATI*, for the protein and solvent atoms of TAXI.

Fig. 2. The left view shows a zoom on the active site. On the right the same view can be seen but a description of the anisotropic displacement of the side-chain atoms of some residues is added: the higher displacements in Trp275 (green) are clearly visible.

Fig. 3. Final Ramachandran plot, as output by *PROCHECK*.

DISTRIBUTION OF ANISOTROPY BY ATOM CLASS
