Table S1 Results from structures in PDB with resolution $\leq 1.2 \AA$.
a) numbers of contact distances found; all are within $\pm 0.5 \AA$ of the target distance.

|  | 0 | O |  | N | S | O |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | water | asp or |  | his | cys | carbonyl |
|  |  | glu |  |  |  | (main ch) |
| Ca | 125 | monodentate | 15 | - | - | 17 |
|  |  | bidentate | 20 |  |  |  |
| Mg | - | 10 |  | - | - | - |
| Fe | 2 | - |  | 7 | 32 | - |
| Zn | 4 | 9 |  | 9 | 11 | - |

b) Mean value of dif (in $\AA$ ), where dif is (observed distance - target distance), and sample standard deviation of dif.

| Ca | 0.03(5) | monodentate | $-0.03(4)$ | - | - |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | $-0.02(4)$ |  |  |  |

| Mg | - | $-0.05(5)$ | - | - | - |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Fe | $0.03(1)$ | - | $0.02(5)$ | $0.01(3)$ | - |
| Zn | $-0.01(2)$ | $-0.02(12)$ | $0.02(5)$ | $0.05(2)$ | - |

Table S2 Data for restraints or for validation of angles in metalloprotein structures.
a) Number of occurrences, Nobs, of different donor groups in 'representative macromolecules' subset of PDB, structures with resolution $\leq 2.8 \AA$, Using these, and the target distances from Table 1 the weighted mean M-donor atom distance, M-N,O was derived. Then, using M-S distances from Table 1 , the mean ratio, 1.10 of $\mathrm{M}-\mathrm{S} / \mathrm{M}-\mathrm{N}, \mathrm{O}$ was derived. [Brackets indicate quantities where very few, if any, observations are available.]

|  | 0 | 0 | 0 | O | 0 | N | S | $\mathrm{M}-\mathrm{N}, \mathrm{O}(\mathrm{A})$ | M-S(A) | M-S/M-N, O |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | water | asp or | ser or | tyr | carbonyl | his | cys | weighted |  |  |
|  |  | glu | thr |  | (main chain) |  |  | mean |  |  |
| Ca | 228 | 638 | 38 | - | 316 | - | - | 2.39 | [2.56] | [1.07] |
| Mg | 175 | 153 | 32 | 2 | 19 | 6 | - | 2.18 | [2.23] | [1.02] |
| Mn | 70 | 101 | 1 | - | 2 | 21 | - | 2.23 | 2.35 | [1.05] |
| Fe | 38 | 135 | - | 21 | 7 | 187 | 78 | 2.06 | 2.27 | 1.10 |
| Cu | 3 | 2 | - | 6 | 4 | 94 | 23 | 1.98 | [2.17] | [1.10] |
| Zn | 98 | 179 | 6 | 1 | 16 | 192 | 156 | 2.05 | 2.29 | 1.115 |

b) Calculation of donor-donor distances
$L_{1}$ and $L_{2}$ are donor atoms

b
metal-donor atom distances $M-L_{1}=a, M-L_{2}=b$
angle between bonds $L_{1}-M-L_{2}=\theta$
donor-donor distance, $L_{1} \ldots L_{2}=\left[a^{2}+b^{2}-2 a b \cos \theta\right]^{1 / 2}$
further, if $b=f^{*} a$ where $f$ is a constant $=M-L_{2} / M-L_{1} \quad a l l L \ldots L$ distances can be expressed in terms
of $M-L_{1}$, a and $f .($ here $f=M-S / M-N, O=1.10$ from above $)$
if $L_{1}=L_{2}=N, O \quad L_{1} \ldots L_{2}=a[2(1-\cos \theta)]^{1 / 2}$
if $L_{1}=N, O$ and $L_{2}=S \quad L_{1} \ldots L_{2}=a\left[1+f^{2}-2 f \cos \theta\right]^{1 / 2}$
if $L_{1}=L_{2}=S \quad L_{1} \ldots L_{2}=\operatorname{af}[2(1-\cos \theta)]^{1 / 2}$
c) donor-donor distances, $\mathrm{L}_{1} \ldots \mathrm{~L}_{2}$, (in $\AA$ ) in octahedral, $\mathrm{ML}_{6}$, coordination (12 angles, $90^{\circ}$, and 3 angles, $180^{\circ}$ )

| angle, $\theta$, $=90^{\circ}$ |  |  |  | angle, $\theta$, $=180^{\circ}$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathrm{L}_{1}=\mathrm{N}, \mathrm{O}$ | $\mathrm{L}_{1}=\mathrm{N}, \mathrm{O}$ | $L_{1}=S$ | $L_{1}=\mathrm{N}, \mathrm{O}$ | $L_{1}=\mathrm{N}, \mathrm{O}$ | $L_{1}=S$ |
|  | $\mathrm{L}_{2}=\mathrm{N}, \mathrm{O}$ | $\mathrm{L}_{2}=\mathrm{S}$ | $\mathrm{L}_{2}=\mathrm{S}$ | $\mathrm{L}_{2}=\mathrm{N}, \mathrm{O}$ | $\mathrm{L}_{2}=\mathrm{S}$ | $\mathrm{L}_{2}=\mathrm{S}$ |
| $L_{1} \ldots L_{2}=$ | 1.414a | 1.487a | 1.555a | 2.00a | 2.10a | 2.20a |
| Ca | 3.38 | 3.55 | 3.72 | 4.79 | 5.02 | 5.26 |
| Mg | 3.08 | 3.24 | 3.39 | 4.36 | 4.58 | 4.80 |
| Mn | 3.15 | 3.32 | 3.47 | 4.46 | 4.68 | 4.91 |
| Fe | 2.91 | 3.06 | 3.20 | 4.12 | 4.33 | 4.53 |
| Cu' | 2.80 | 2.94 | 3.08 | 3.96 | 4.16 | 4.36 |
| Zn | 2.90 | 3.05 | 3.19 | 4.10 | 4.31 | 4.51 |

Recommendation: restraints should be applied to all distances < $3.8 \AA$, to 'adjacent' donor atoms in first coordination sphere. using standard deviations $0.15 \AA$ for $\mathrm{Ca}, \mathrm{Mg}, \mathrm{Mn}, \mathrm{Fe}$ and Zn , and $0.30 \AA$ for Cu ".
d) donor-donor distances, $L_{1} \ldots L_{2}$, (in $\AA$ ) in tetrahedral , $M L_{4}$, coordination ( 6 angles, $109.5^{\circ}$ )

| angle, $\theta,=90^{\circ}$ |  |  |  |
| :--- | :--- | :--- | :--- |
|  | $L_{1}=\mathrm{N}, \mathrm{O}$ | $\mathrm{L}_{1}=\mathrm{N}, \mathrm{O}$ | $\mathrm{L}_{1}=\mathrm{S}$ |
| $\mathrm{L}_{2}=\mathrm{N}, \mathrm{O}$ | $\mathrm{L}_{2}=\mathrm{S}$ | $\mathrm{L}_{2}=\mathrm{S}$ |  |
| $\mathrm{L}_{1} \ldots \mathrm{~L}_{2}=1.633 \mathrm{a}$ | 1.716 a | 1.797 a |  |
|  |  |  |  |
| Mg | 3.56 | 3.74 | 3.92 |
| Mn | 3.64 | 3.83 | 4.01 |
| Fe | 3.36 | 3.53 | 3.70 |
| $\mathrm{Cu}^{\prime}$ | 3.56 | 3.74 | 3.92 |
| Zn | 3.35 | 3.52 | 3.68 |

Recommendation: restraints should be applied to all donor..donor distances, with standard deviation 0.20 Å.
For square planar $\mathrm{Cu}^{\prime \prime}$ distances given above for octahedron may be used.
e) Expected donor-donor distances, $\mathrm{L}_{1} \ldots \mathrm{~L}_{2}$, in 5 -coordinate complexes, $\mathrm{ML}_{5}$, with ideal geometry. Distances are given only as the multipliers for a, the $\mathrm{M}-\mathrm{N}, \mathrm{O}$ distance. In the tetp configuration, $105^{\circ}$ has been chosen as angle between apical and basal bonds since this is a typical value. It can be seen that even when only one ligand type is present (e.g. $\mathrm{N}, \mathrm{O}$ but no S ) it will not often be practicable to classify and restrain the different $\mathrm{L} . . . \mathrm{L}$ distances; only BUMP type restraints are practicable.
angles $\left({ }^{\circ}\right)$

$$
\begin{aligned}
& L_{1}=\mathrm{N}, \mathrm{O} \\
& \mathrm{~L}_{2}=\mathrm{N}, \mathrm{O} \\
& \mathrm{a}(2-2 \cos \theta)^{1 / 2}
\end{aligned}
$$

$\mathrm{L}_{1}=\mathrm{N}, \mathrm{O}$
$\mathrm{L}_{2}=\mathrm{S}$
$a\left(1+f^{2}-2 f \cos \theta\right)^{1 / 2}$
$\mathrm{L}_{1}=\mathrm{S}$
$\mathrm{L}_{2}=\mathrm{S}$

Table S3 Observations leading to parameters for 'BUMP type restraint in metal coordination complexes. These are based on non-chelated complexes in the CSD, with $R \leq 0.065 \AA$. Distances were extracted, and their distributions examined, and the mean and standard deviation corresponding to adjacent atoms (i.e. distances < $3.8 \AA$ in octahedral complexes, < $3.6 \AA$ in 5-coordinate complexes) extracted. $\sigma$ is the sample standard deviation.

| $L_{1} \ldots L_{2}(A ̊)$ | with $L_{1}=L_{2}=N, O$ | mean ( $\sigma$ ) | minimum | mean of lower part if distribution composite | number observations | proposed parameters |
