Supplementary data

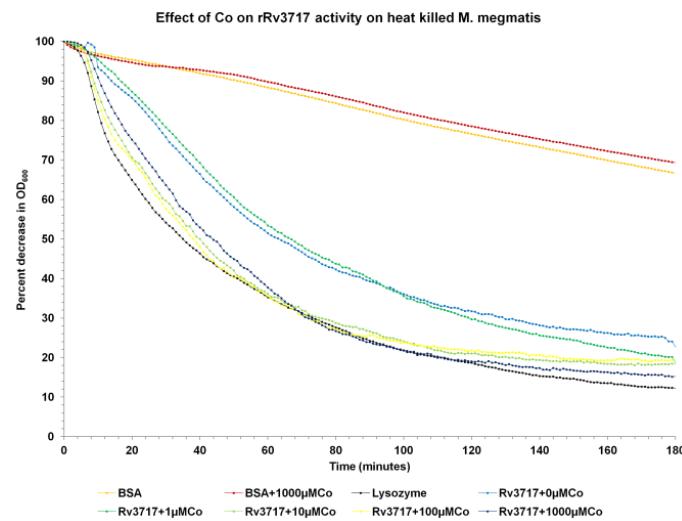

**Supplementary Figure S1: Activity of rRv3717-A on heat killed *M. smegmatis* in presence of different metal ions**

Activity of rRv3717-A was estimated with 0 (blue), 1( sea green), 10 (light green), 100 (yellow) or 1000  $\mu\text{M}$  (brown) of (A)  $\text{Cu}^{2+}$ , (B)  $\text{Co}^{2+}$ , or (C)  $\text{Mg}^{2+}$  at 37°C. BSA (orange) or BSA+ 1000  $\mu\text{M}$  of respective cation (red) was used as negative control; while lysozyme (black) served as positive control for the reaction.

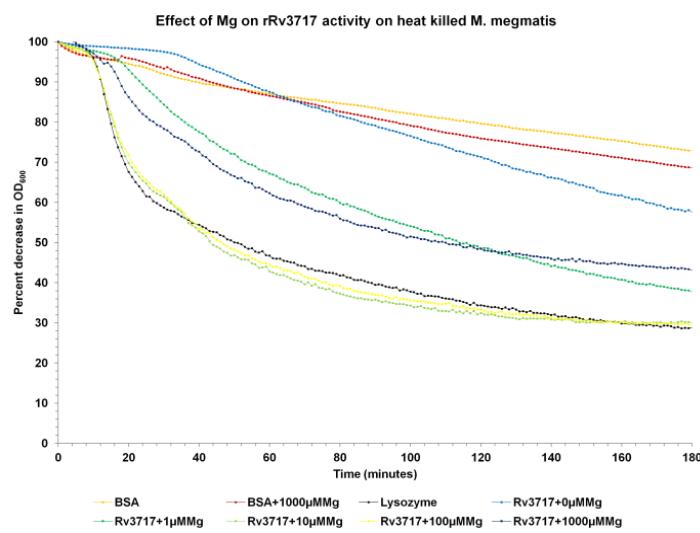

A.

B.

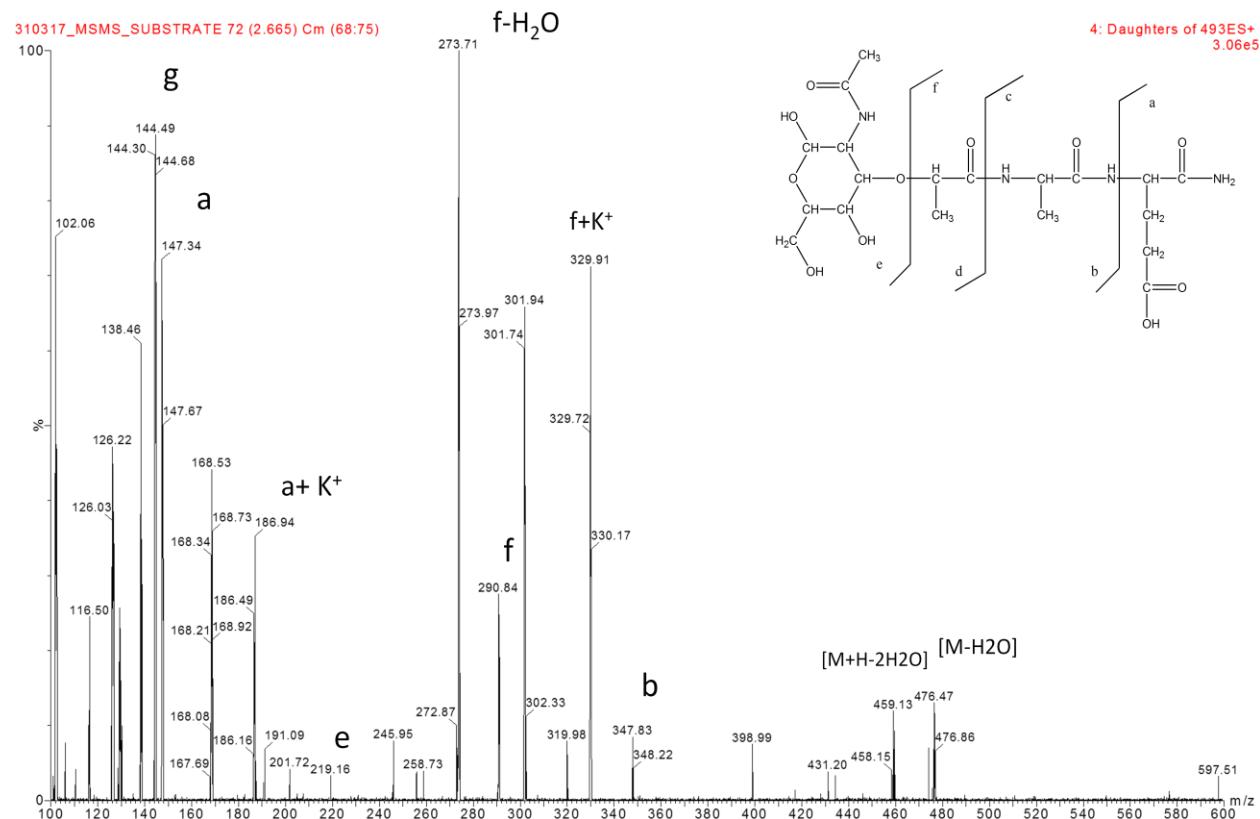

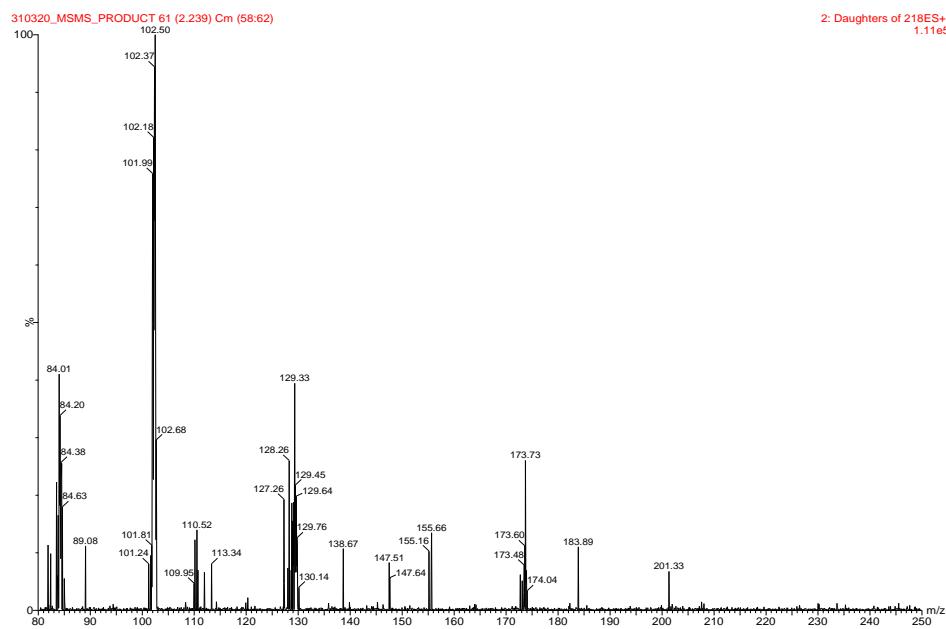

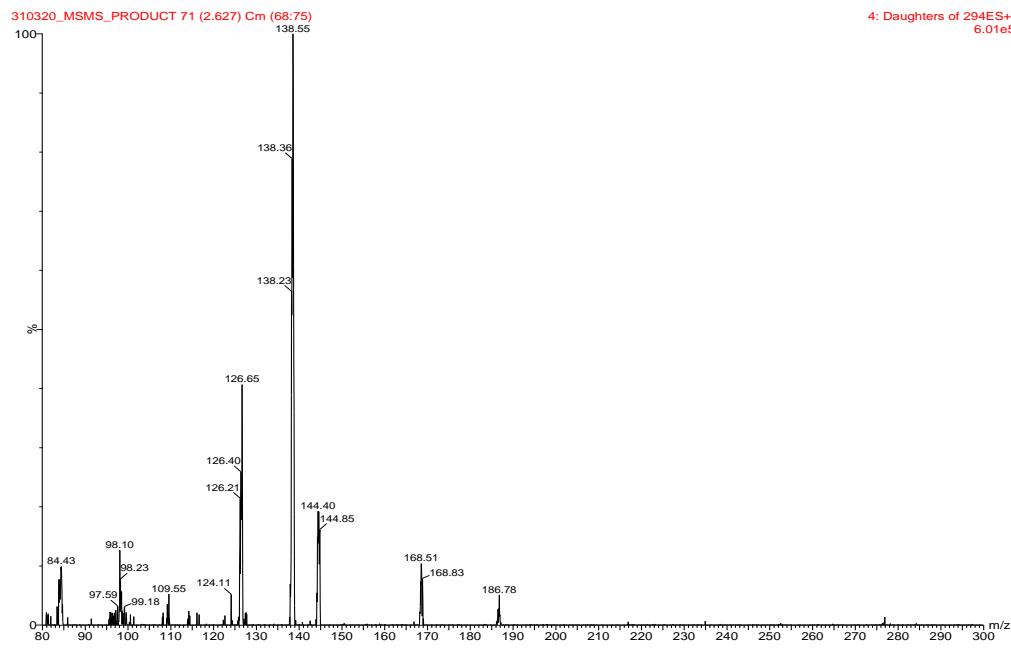

C

**Figure S2: MS/MS analysis of (A) substrate, N-acetylmuramoyl-L-alanyl-D-isoglutamine (B) dipeptide, L-alanyl-D-isoglutamine and (C) N-acetyl muramic acid**

A

**B****C**

**Figure S3: MS analysis of N-acetylmuramoyl-L-alanyl-D-isoglutamine in the control reaction (no protein) after 4 hours at 37°C**
