

# **Acta Crystallographica Section D**

**Volume 70 (2014)**

**Supporting information for article:**

**Structure of the ubiquitin-activating enzyme loaded with two  
ubiquitin molecules**

**Antje Schäfer, Monika Kuhn and Hermann Schindelin**

**Figure S1** Crystal packing. Crystal packing analysis illustrates that the Ub(t) (orange) contacts two Uba1 symmetry mates (grey and black), thus stabilizing it and presumably leading to its visibility. At the equivalent position in the second Uba1 complex the presence of Ub(t) is prevented (circle).
