

# Acta Crystallographica Section D

Volume 70 (2014)

Supporting information for article:

**Structural basis for glucose tolerance in GH1  $\beta$ -glucosidases**

**Priscila Oliveira de Giuseppe, Tatiana de Arruda Campos Brasil Souza, Flavio Henrique Moreira Souza, Leticia Maria Zanphorlin, Carla Botelho Machado, Richard John Ward, Joao Atilio Jorge, Rosa dos Prazeres Melo Furriel and Mario Tyago Murakami**

**Figure S1** Cartoon representation of a crystallographic dimer whose interface is formed by the loop B (shown in blue) from symmetry-related HiBG monomers.
