Supporting information for article:

New features of the RootProf program for model-free analysis of unidimensional profiles

Annamaria Mazzone, Mattia Lopresti, Benny Danilo Belviso and Rocco Caliandro

S1. Command file for Savitzky–Golay filtering

```
whichanalysis 0
preprocess 12
sgfilter 0 2 9
file A.xy
```

where the commands *whichanalysis* 0 initiates the First Sight analysis, *preprocess* 12 defines the pre-processing, which in this case is the Savitzky–Golay filtering, *sgfilter* 0 2 9 set the parameters for the Savitzky–Golay filtering, defining respectively the order of derivation, polynomial degree and window, and *file* defines the input file containing the profile.

S2. Command file for peak alignment

```
whichanalysis 0
preprocess 0 0 0 5
range 2.8 16.0
shiftfactor 0.3
peakalign 2
file 1.epf.extract
file 2.epf.extract
file 3.epf.extract
file 4.epf.extract
file 5.epf.extract
file 6.epf.extract
file 7.epf.extract
file 8.epf.extract
file 9.epf.extract
file 10.epf.extract
```

where the commands *whichanalysis* 0 initiates the First Sight analysis, *preprocess* 0 0 0 5 defines the pre-processing, which in this case is the peak alignment, *range* 2.8 16.0 defines the interval of 29 values considered, *shiftfactor* 0.3 reduces the vertical shift among profiles in the plot, *peakalign* 2 sets the peak alignment procedure as constituted by the Peak Correspondence method followed by Harmonic Time Stretch one, and *file* defines the input file containing the profile.

S3. Command file for qualitative analysis

```
whichanalysis 1
range 10 70
preprocess 3 2
threshold -2
skipdata 5
clusterswitch 0
file AC.xy
file AD.xy
file CD.xy
file ACD.xy
file A.xy
purephase
file C.xy
```

```
purephase  
file D.xy  
purephase
```

where the commands *whichanalysis* 1 initiates the qualitative analysis, *file* defines the input files containing the profiles, *range* 10 70 defines the interval of 29 values considered, *preprocess* 3 2 defines the pre-processing, which in this case is a logarithmic conversion of the intensity values followed by a profile normalization based on the area under the profile, *threshold* -2 forces to consider only the first two principal components, *skipdata* 5 reduces the sampling of the input files, taking each point out of five, *clusterswitch* 0 inhibits the hierarchical clustering procedure, and *purephase* tags the profiles that appear immediately above as pure-phase profiles.

S4. Command file for the Optimal Constrained Component Rotation

```
whichanalysis 1  
medanalysis 1  
ignoresigma 1  
skipdata 3  
preprocess 0 0 5  
threshold -3  
clusterswitch 0  
writescores 1  
writeloadings 1  
file OCCR_00.dat  
file OCCR_01.dat  
file OCCR_02.dat  
file OCCR_03.dat  
file OCCR_04.dat  
file OCCR_05.dat  
file OCCR_06.dat  
file OCCR_07.dat  
file OCCR_08.dat  
file OCCR_09.dat  
file OCCR_10.dat  
file OCCR_11.dat  
file OCCR_12.dat  
file OCCR_13.dat  
file OCCR_14.dat  
file OCCR_15.dat  
file OCCR_16.dat  
file OCCR_17.dat  
file OCCR_18.dat  
file OCCR_19.dat  
file OCCR_20.dat  
file OCCR_21.dat  
file OCCR_22.dat  
file OCCR_23.dat  
file OCCR_24.dat
```

where the commands *whichanalysis* 1 initiates the qualitative analysis, *file* defines the input files containing the profiles, *preprocess* 0 0 5 defines the pre-processing, which in this case is a background

subtraction carried our with a 5 points window, *threshold* -3 forces to consider the three principal components, *skipdata* 3 reduces the sampling of the input files, taking each point out of three, *ignoresigma* 1 does not read the third column present in the input files, *clusterswitch* 0 inhibits the hierarchical clustering procedure, *medanalysis* 1 activates the OCCR analysis, *writescores* 1 and *writeloadings* 1 writes respectively the score and loading values of each considered component on external files. Please note that both the original values and those rotated are written.

S5. Command files for kinetic analysis

Two different runs of RootProf are needed.

S5.1. Run 1: Extraction of the reaction coordinate

```
whichanalysis 1
 preprocess 0 0 50
 threshold -1
 writescores 1
 file file_77.txt
 file temp_79.txt
 file temp_81.txt
 file temp_83.txt
 file temp_85.txt
 file temp_87.txt
 file temp_89.txt
 file temp_91.txt
 file temp_93.txt
 file temp_95.txt
 file temp_100.txt
 file temp_105.txt
```

where the commands *whichanalysis* 1 initiates the qualitative analysis, *file* defines the input files containing the profiles, *preprocess* 0 0 50 defines the pre-processing, which in this case is a background subtraction carried our with a 50 points window, corresponding to a de-trend operation, *threshold* -1 forces to consider only the first principal component, and *writescores* 1 writes the score values of the first principal component on an external file.

S5.2. Run 2: Study of the reaction kinetics

```
whichanalysis 13
 file ScoresPC1
 temp 77 79 81 83 85 87 89 91 93 95 100 105
 kelvin 0
 beta 0.81
 tfitmin 0.0026
 tfitmax 0.00285
 eneatt 60
```

where the commands *whichanalysis* 13 initiates the kinetic analysis, *file* defines the input file, containing the reaction coordinate values, *temp* sets the temperature values corresponding to each

reaction coordinate value, *kelvin* indicates that temperatures are expressed in Celsius degrees, *beta* sets the rate of temperature changes, expressed in K/s, *eneatt* defines the activation energy expressed in KJ/mol necessary to define the Masterplot, and *tfitmin* and *tfitmax* set the $1/T$ range to perform the fitting in the Coats & Redfern plot.

S6. Command file for crystallinity and size analysis

```
ignoresigma 1
preprocess 0 2
!-----
!—crystallinity analysis
whichanalysis 9
range 12.7 14.5
cryst 10 20
!-----

file bulk_fill_0001p_00096.dat
file bulk_fill_0001p_00099.dat
file bulk_fill_0001p_00102.dat
```

where the commands *preprocess* 0 2 defines the pre-processing, which in this case consists in a normalization to the area subtended by the profile, *ignoresigma* 1 prevents reading the third column contained in the input files, *file* defines the input profile, *whichanalysis* 9 initiates the crystallinity analysis, *range* 12.7 14.5 defines the interval of 29 values considered, *cryst* 10 20 sets the sensitivity of the peak search procedure (10) and the clipping window for the background subtraction (20). The size analysis can be carried out by replacing these last three commands with the commands: *whichanalysis* 6, which activates the size analysis, *range* 7 34, which enlarges the interval of 29 values considered, *theta0* and *toltheta0*, which define respectively the central value and tolerance of the peak considered for fitting, *theta0st*, which defines the central value of the peak of the standard compound considered for fitting, *lambda*, which sets the wavelength used for measurements, *nstandard*, which follows the file representing the measured profile for the standard compound.

S7. Command file for the standard addition method

```
whichanalysis 3
preprocess 0 3 30
file agg0_1.ASC
sam 0
file agg0_2.ASC
sam 0
file agg0_4.ASC
sam 0
file agg1_1.ASC
sam 0.15
file agg1_2.ASC
sam 0.15
file agg1_3.ASC
sam 0.15
file agg2_1.ASC
sam 0.25
file agg2_2.ASC
sam 0.25
file agg2_3.ASC
sam 0.25
file agg3_1.ASC
sam 0.35
file agg3_2.ASC
sam 0.35
file agg3_3.ASC
sam 0.35
file paracetamol.ASC
```

purephase

where the commands *whichanalysis* 3 initiates the quantitative analysis, *preprocess* 0 3 30 defines the pre-processing, which in this case consists in a rescaling based on the standard normal variate followed by a background subtraction carried our with a 30 points window, *file* defines the input file, containing Tachifludec® with different amount of paracetamol added, *sam* sets the known weight fraction of paracetamol added, *purephase* tags the paracetamol, i.e. the pure-phase profile.

S8. Command file for combined quantitative analysis

```
whichanalysis 3
combine 1
skipdata 8
file AM1.iq
purephase
referw 1 0
file AM2.iq
referw 0.9 0.1
file AM3.iq
referw 0.8 0.2
fileAM4.iq
referw 0.7 0.3
file AM5.iq
referw 0.6 0.4
file AM6.iq
referw 0.5 0.5
file AM7.iq
referw 0.4 0.6
file AM8.iq
referw 0.3 0.7
file AM9.iq
referw 0.2 0.8
file AM10.iq
referw 0.1 0.9
file AM11.iq
purephase
referw 0.0 1.0
file2 AM1.gr
file2 AM2.gr
file2 AM3.gr
file2 AM4.gr
file2 AM5.gr
file2 AM6.gr
file2 AM7.gr
file2 AM8.gr
file2 AM9.gr
file2 AM10.gr
file2 AM11.gr
```

where the commands *whichanalysis* 3 initiates the quantitative analysis, *file* and *file2* define the input profiles for the datasets in reciprocal space (.iq extension) and direct space (.gr extension), *skipdata* 8

reduces the number of data points for the profiles of the first dataset, where only 1 point out of 8 is read, *refew* defines the known weight fraction in the mixture file (it is only used for testing purposes), *purephase* tags the reference profiles, i.e. the pure-phase profiles, and *combine* 1 enables the combination of the weight fraction estimates in reciprocal and direct space.

S9. Crystal cell parameters extraction from PDF profiles

```
whichanalysis 12
preprocess 0 7 10
range 2 40
lattice 0
file Cubic.cif.gr
```

where the commands *whichanalysis* 13 initiates the PDF analysis, *preprocess* 0 7 10 defines the pre-processing, which in this case consists in a rescaling in the range [0,1] followed by a background subtraction carried our with a 10 points window, *range* defines the interval of interatomic distances considered for the PDF analysis, *lattice* defines the lattice type, which in this case is Cubic, and *file* define the input PDF profile to be used for crystal cell parameters extraction.

S9.1. Output for the cubic langbeinite

Reading input files:
