## Supplementary Material

Supplementary Table S1. Compound cocktails A to F were dissolved in the cryo-buffer for the final concentrations given.

| A |  |  | H |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |
|  | 4-Bromophenylacetic acid | 4-Bromois | line | 4-Bromo-2 | orophenol |
|  | $215.04 \mathrm{Da} \quad 4.5 \mathrm{mM}$ | 215.01 Da | 7.5 mM | 207.45 Da | 4.5 mM |
| B |  |  |  |  |  |
|  |  |  |  |  |  |
|  | 5-Bromo-2-furancarboxylic acid <br> $190.98 \mathrm{Da} \quad 7.5 \mathrm{mM}$ | 4-Bromoac | enone | Bromochol |  |
|  |  | 199.04 Da | 7.5 mM | 246.97 Da | 5.0 mM |
| C |  |  |  |  |  |
|  |  |  |  | $\mathrm{Br}$ |  |
|  | 2-Bromoethanesulfonic acid sodium $211.01 \mathrm{Da} \quad 5.0 \mathrm{mM}$ | (+)-3-Bromocamphor |  | 2-Amino-3-nitro-5bromopyridine |  |
| D |  |  |  |  |  |
|  | 4-Bromomethylpyridine hydrobromide$252.93 \mathrm{Da} \quad 6.0 \mathrm{mM}$ | 5-Bromodeoxy cytidine |  | 2.6-Dibromo-4-nitrophenol |  |
|  |  | 306.11 Da | 5.0 mM | 296.90 Da | 5.0 mM |
| E |  |  |  |  |  |
|  | 2-Hydroxy-5-nitrobenzyl bromide | 2-Bromo-1 |  | 3.5-Dibrom | -tyrosine |
|  | $232.03 \mathrm{Da} \quad 6.0 \mathrm{mM}$ | 213.07 Da | 5.0 mM | 338.98 Da | 4.5 mM |

4-Bromo-dimethylaniline $200.08 \mathrm{Da} \quad 5.0 \mathrm{mM}$

2-Bromobenzyl alcohol $187.03 \mathrm{Da} \quad 5.0 \mathrm{mM}$

3-Acetoxy-5-bromoindole $254.08 \mathrm{Da} \quad 5.0 \mathrm{mM}$

Supplementary Table S2. Values in parentheses are for the highest resolution bin. Each data set was collected from individual, single crystals. From 'Anom. completeness' to 'DelAnom correlation between half-sets' statistics are reported from AIMLESS. All other statistics are reported from Phenix.

Supplementary Fig. S1. FTMap results overlaid with known ligands of EF-Tu. BFA in yellow sticks (4H9G), GE2270 A in grey sticks (2C77), adenosine in brown sticks (1TTT). Clusters of organic solvents docked by FTMap are shown as lines. Red is the 1 st cluster, green is the 6 th cluster, cyan is the 7 th cluster, purple is the 10 th cluster. The structure is 1 EFT coloured as before, domain 1 in red, domain 2 in green, domain 3 in cyan. Ile231 and Leu 289 are shown in sticks in the 1EFT rotamers that block the hydrophobic site. GE2270 A clashes with domain 1 from 1EFT because it induces domain movement.

Supplementary Fig. S2. Kirromycin (aka aurodox), 1HA3, in yellow and enacyloxin, 2BVN, in grey. 2nd cluster is red, the 3 rd cluster is green, the 5 th cluster is cyan, and the 8 th cluster is purple. Structures are superposed on the red domain 1. In 1HA3 and 2BVN the area occupied by cluster 8 is filled with protein because of a conformational change. In 1 EFT the area between cluster 3 and 5 is filled with protein.

Supplementary Fig. S3. Cluster 4 in green lines occupying the site where the beta and gamma phosphates of GDPNP bind.

Supplementary Fig. S4. The structures are 1EFT in complex with GDPNP and 1TUI in complex with GDP coloured as before, but 1TUI is shown with a transparent surface. Cluster 9 is located in the hinge region between domains 1 and 2 and shown as purple spheres for the sake of clarity.
