Spatiotemporal control of I-phenylalanine crystallization in microemulsion: the role of water in mediating molecular selfassembly

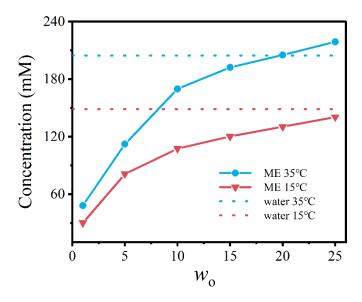

Qi Liu, Jingkang Wang, Xin Huang, Hao Wu, Shuyi Zong, Xiaowei Cheng and **Hongxun Hao** 

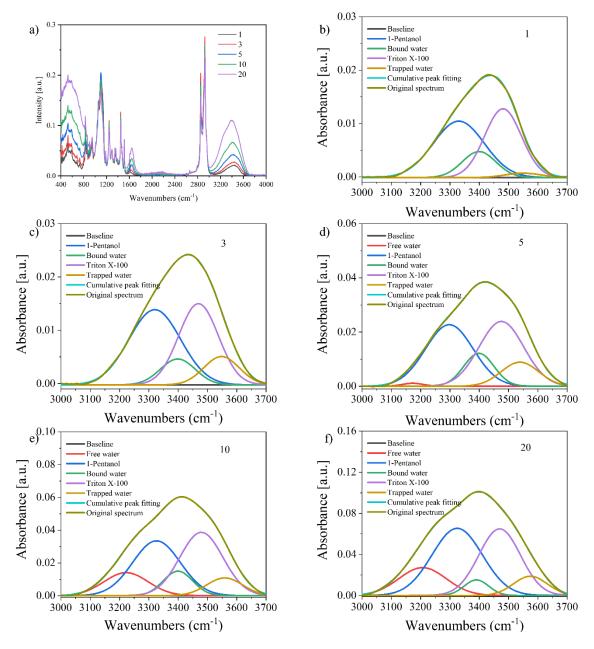

**Figure S1** The images of crystalline fibril structure measured by laser confocal Raman spectroscopy.

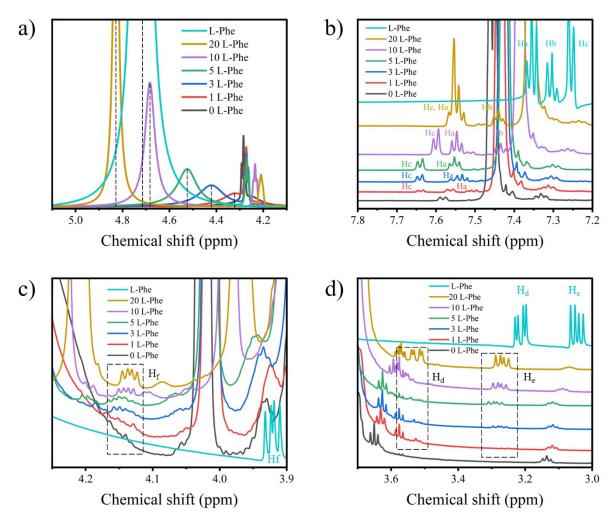

**Figure S2** Optical micrograph of L-Phe with different  $w_0$  at concentration of a) 120 mM, b) 150 mM, c) 180 mM. d) SEM images of L-Phe at concentration of 180 mM.  $w_0$  is on the top right of each image.

**Figure S3** Solubility of L-Phe in microemulsion at 15 °C and 35 °C. The dotted line represents the solubility of L-Phe in pure water, and the solid line represents the ratio of L-Phe in water of ME.

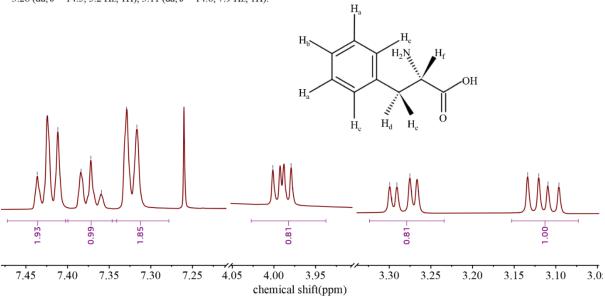

**Figure S4** a) ATR-FTIR spectra of ME ( $w_0 = 1, 3, 5, 10, 20$ ). b-f) The O–H stretching region (3000–3700 cm<sup>-1</sup>) of ME in all systems were fitted with a Gaussian program in OriginLab software, the fitting peaks correspond to free water (3200 ± 20), 1-pentanol (3310 ± 10), bound water (3395 ± 10), Triton X-100 (3470 ± 10), trapped water (3555 ± 10), respectively.

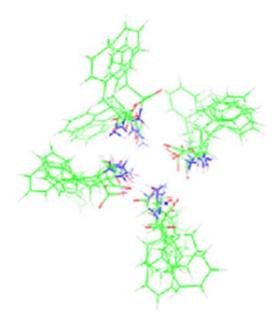

**Figure S5** <sup>1</sup>H NMR profiles of L-Phe in microemulsion. Partial enlarged drawing in Figure 4a corresponds to a) <sup>1</sup>H of water, b) H<sub>a</sub>, H<sub>b</sub>, H<sub>c</sub> of L-Phe, c) H<sub>f</sub> of L-Phe, d) H<sub>d</sub> of L-Phe.

 $^{1}$ H NMR (600 MHz, Chloroform-d)  $\delta$  7.42 (t, J = 7.4 Hz, 2H), 7.37 (t, J = 7.3 Hz, 1H), 7.32 (d, J = 7.5 Hz, 2H), 3.99 (dd, J = 7.9, 5.3 Hz, 1H), 3.28 (dd, J = 14.5, 5.2 Hz, 1H), 3.11 (dd, J = 14.6, 7.9 Hz, 1H).

**Figure S6** NMR profiles of L-Phe in bulk solution.  $^{1}$ H (600 MHz; CDCl<sub>3</sub>) NMR spectrum of L-phenylalanine.  $\delta$  7.42 (t, J = 7.4 Hz, 2H), 7.37 (t, J = 7.3 Hz, 1H), 7.32 (d, J = 7.5 Hz, 2H), 3.99 (dd, J = 7.9, 5.3 Hz, 1H), 3.28 (dd, J = 14.5, 5.2 Hz, 1H), 3.11 (dd, J = 14.6, 7.9 Hz, 1H).

**Figure S7** Proposed lowest energy structure of L-phenylalanine. Copyright © 2015, American Chemical Society.

**Figure S8** XRD of L-Phe. Red line is the prepared L-Phe monohydrate sample, blue line is raw of L-Phe (form I).
