### S1. Cocrystallisation of barcyt

The dihydrate adduct of cytosine barbiturate with barbituric acid and cytosine (**barcyt**) was obtained by mixing aqueous solutions of barbituric acid and cytosine in equimolar ratio at temperature *ca.* 343K. The product was recrystallized from the mixture of ethanol and water in the ratio 2:1. The structure of barcyt follows the symmetry of space group  $P\bar{1}$ . Contents of the asymmetric unit with atom numbering scheme is presented in Figure S1, whereas the packing of the structural components can be seen in Figure S2. Details of the data collection and the refinement procedure are presented in Table S1.

**Figure S1** Asymmetric unit of barcyt with the atom numbering scheme. Displacement ellipsoids are drawn at 50% probability level.

**Figure S2** a) Packing of the **barcyt** structure components a) viewed along [010] b) the layer  $0 \leq a \leq 0.25$  viewed along [100].

**Table S1** Crystal data and structure refinement details for **barcyt**.

Identification code	<b>barcyt</b>
Empirical formula	C <sub>16</sub> H <sub>22</sub> N <sub>10</sub> O <sub>10</sub>
Formula weight	514.44
Temperature	293(2) K
Wavelength	0.71073 Å
Crystal system	Triclinic
Space group	P $\overline{1}$
Unit cell dimensions	a = 6.7486(3) Å $\alpha$ = 81.293(3) $^\circ$ b = 10.5419(4) Å $\beta$ = 79.732(2) $^\circ$ c = 15.6580(7) Å $\gamma$ = 79.974(3) $^\circ$
Volume	1071.02(8) Å <sup>3</sup>
Z	2
Density (calculated)	1.595 g/cm <sup>3</sup>
Absorption coefficient	0.134 mm <sup>-1</sup>
F(000)	536
Crystal size	0.24 x 0.13 x 0.10 mm
Diffractometer	Nonius KappaCCD*
Theta range for data collection	3.12 to 25.50 $^\circ$
Index ranges	-7≤h≤8, -12≤k≤12, 0≤l≤18
Reflections collected	8425
Independent reflections	3947 [R(int) = 0.0770]
Completeness to theta = 25.50 $^\circ$	98.9 %
Reflections with I>2sigma(I)	2509
Absorption correction	Multi-scan**
Max. and min. transmission	0.987 and 0.969
Refinement method	Full-matrix least-squares on F <sup>2</sup>
Data / restraints / parameters	3947 / 17 / 370
Goodness-of-fit on F <sup>2</sup>	1.024
Final R indices [I>2sigma(I)]	R1 = 0.0449, wR2 = 0.0984
R indices (all data)	R1 = 0.0861, wR2 = 0.1110
Largest diff. peak and hole	0.235 and -0.203 eÅ <sup>-3</sup>
