

STRUCTURAL  
CHEMISTRY

**Volume 74 (2018)**

**Supporting information for article:**

**Concomitant polymorphism in an organometallic ruthenium(II)  
complex with an *N,N'*-donor ligand**

**Katja Traven, Iztok Turel, Julia Koziskova, Lukáč Bučinský and Jozef Kožíšek**

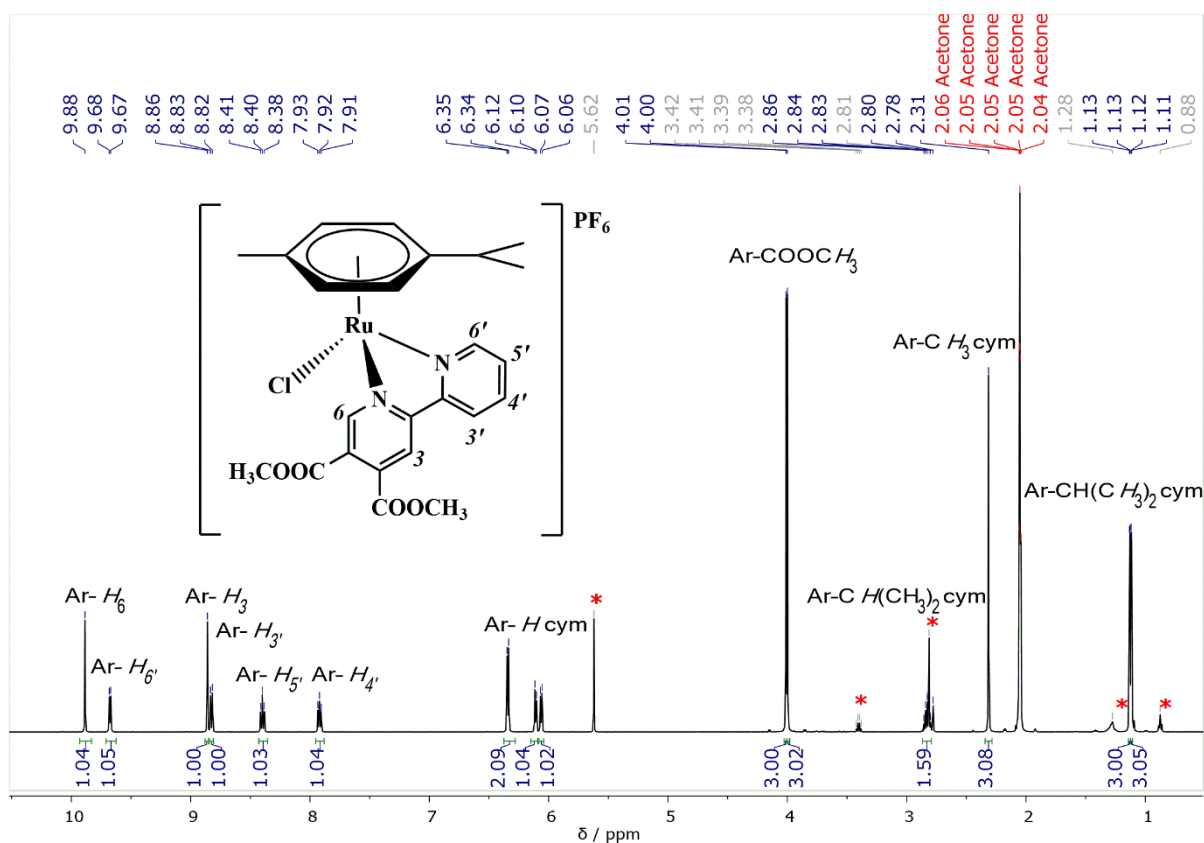

Figure S1:  $^1\text{H}$  NMR spectrum of the studied complex with the proton assignment for the studied complex. With \* are marked the protons belonging to the solvent residue (dichloromethane, diethylether, water and hexane).

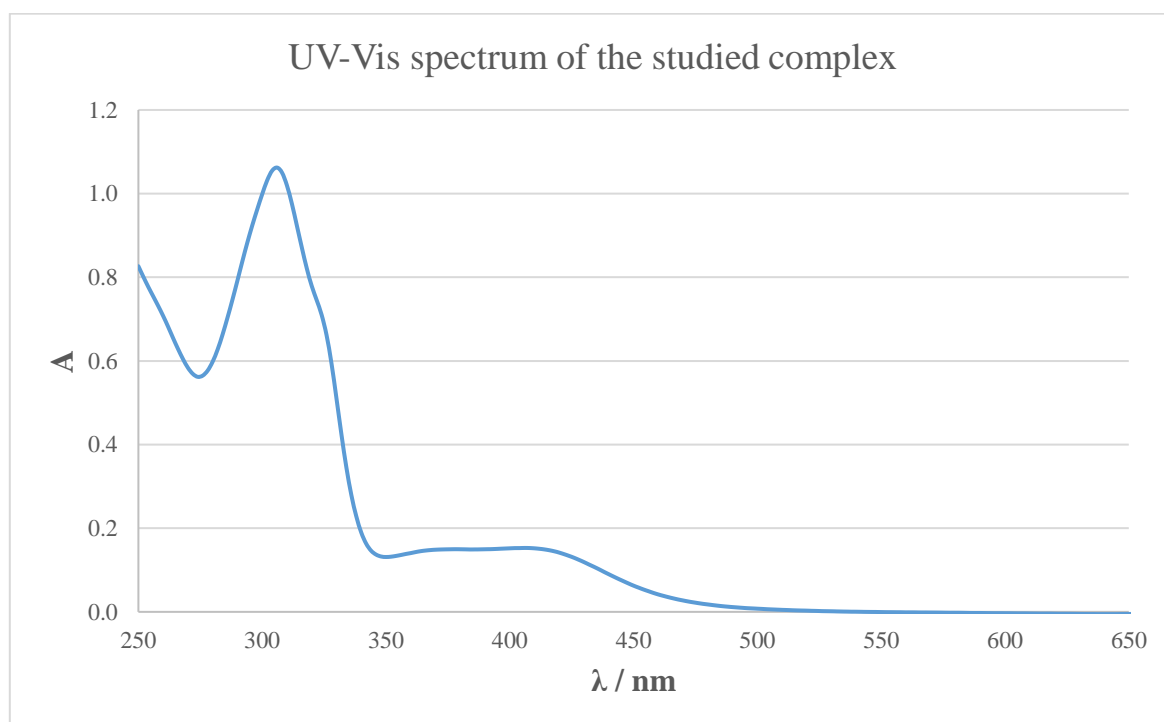

Figure S2: Experimental UV-Vis spectra of the studied complex in methanol with concentration of 60  $\mu\text{M}$ .
