

Supporting Information for article:

Synthesis and crystal structures of new chiral 3-amino-2*H*-azirines and the Pd-complex of one of them

Anthony Linden, Christoph B. Bucher, Ralf Gubler, José M. Villalgordo, and Heinz Heimgartner

Figure S1 View of the molecular structure of **11** with all disordered components overlaid. Displacement ellipsoids are drawn at the 10% probability level. H atoms have been omitted for clarity.

Figure S2 View of the molecular structure of **14** with both disordered components overlaid. Displacement ellipsoids are drawn at the 30% probability level. H atoms have been omitted for clarity.
