

Table S4: Accuracy of Inference on 100 simulated admixed individuals among pairs of countries in Europe.

	FIN	GBR	TSI	CEU
FIN	na	0.76	0.77	0.77
GBR		na	0.74	0.75
TSI			na	0.77
CEU				na

We used admixture proportions of (0.5,0.5) and 6 generations of admixture. Accuracy is reported as haploid error (see main text). We observe a high proportion of heterozygous ancestry calls (over 90%), consistent with increased ambiguity in the calling using sCSVs for closely related populations.
