8 **Figure S2.** Morphology of Arabidopsis seedlings growth on media containing H₂ and
9 NaCl. 25-day-old seedlings were pre-incubated in 50% H₂-saturated MS liquid
10 medium for 24 hr, and then exposed to the MS liquid medium in the presence or
11 absence of 150 mM NaCl for another 8 days. Sample without chemicals was the
12 control (Con). Bar = 2 cm.
