

S5 Figure. Kaplan-Meier analysis of animal survival of wild-type mice after 15min MCAO treated with or without anti-TLR4 antibody *i.a.*. The percentage of surviving C57Bl/6N wild-type mice after 15min MCAO with (**TLR4-Ab**) or without (**PBS**) *i.a.* application of anti-TLR4/MD2 mAb from postoperative day 1 up to day 14 after start of reperfusion is shown ($n_{PBS} = 17$; $n_{TLR4} = 18$).
