GA-AC, estimated gestational age by abdominal circumference; GA-GCT, actual gestational age by last menstruation period (LMP) at 50-g GCT (glucose challenge test) and fetal biometry; BMI-50-g GCT, BMI measured at 50-g GCT; FPG, fasting plasma glucose on 100g OGTT; HbA1c, glycated hemoglobin; HOMA- $\beta$ , homeostatic model assessment for insulin secretion; HOMA-IR, homeostatic model assessment for insulin resistance; GA-FL, estimated gestational age by femur length ; GA-BPD, estimated gestational age by biparietal diameter;
