

Table S3: Relative virus inputs for cell lines used

	rVSV-ANDV	VSV-(HTNV)	VSV-(G)
Vero E6	1	1	1
A549	10	5	2
CHO-K1	12	8	2
293T	1	5	1
HAP1	1	6.5	1

Values are normalized to virus input required to achieve ~30% infection in Vero E6 cells. Numbers reported are the fold increase in viral input needed to achieve similar infection levels in the indicated cell line.
