***ADDRESS FOR CORRESPONDENCE:** Klinički bolnički centar Sestre milosrdnice, Vinogradska 29, HR-10000 Zagreb, Croatia. / Phone: +385-98-383-639 / E-mail: zbabic@net.hr

Radna skupina za akutni koronarni sindrom (RSACS) Hrvatskoga kardiološkog društva (HKD) osnovana je 2004. godine odlukom vodstva HKD. Od osnivanja do odlaska u mirovinu u lipnju 2013. godine predsjednik RSACS bio je prof. dr. sc. Vjeran Nikolić Heitzler, a nakon njega tu funkciju preuzima dotadašnji tajnik doc. dr. sc. Zdravko Babić.

Usporedno s velikim znanstvenim i stručnim naprecima u liječenju akutnog koronarnog sindroma (AKS) pod vodstvom RSACS postojeći centri intervencijskog kardiološkog liječenja 2005. godine započinju se postupno organizirati u Hrvatsku mrežu primarne perkutane koronarne intervencije (pPCI) preuzimajući odgovornost i za bolesnike transportirane iz okolnih županijskih bolnica u akutnoj fazi infarkta miokarda (AIM) pokrivajući do danas permanentnom službom preko 90% teritorija Republike Hrvatske (RH).

Rezultati ove mreže međunarodno su prepoznati, usporedivi su s rezultatima zemalja znatno višeg bruto nacionalnog dohotka te se RH svrstava među zemlje s najbolje organiziranim liječenjem AIM u Europi, a time i u svijetu. Rezultati su evidentni i kroz statističke pokazatelje Hrvatskog zavoda za javno zdravstvo koji upućuju da je smrtnost kardiovaskularnih bolesti u Hrvatskoj u proteklih deset godina, dakle od osnivanja mreže, smanjena sa 50,3% na 48,1%, a što je najvećim dijelom posljedica smanjene smrtnosti od AMI.

RSACS je od svoga osnutka organizirala niz stručnih i znanstvenih skupova u cilju trajne edukacije liječnika. Voditelji Radne skupine sudjelovali su kao predavači, moderator i predsjedavajući na nizu domaćih i inozemnih kardioloških skupova te bili autori niza stručnih i znanstvenih članaka iz područja kardiologije. Daljnji ciljevi RSACS su, uz zadržavanje dosadašnje razine aktivnosti, daljnja suradnja s kolegama iz različitih kardioloških centara RH i organizacija kontinuiranog registra za AKS i akutna kardiološka stanja uopće u RH te praćenje najsuvremenijih saznanja o liječenju akutnih stanja u kardiologiji i njihova implementacija u svakodnevno liječenje naših bolesnika.

The Working Group for Acute Coronary Syndrome (WGACS) of the Croatian Cardiac Society (CCS) was founded in 2004 by the decision of the leadership of the CCS. First president of WGACS was Prof. Vjeran Nikolić Heitzler, MD, PhD until his retirement in June 2013, after that this function takes former secretary Assist. Prof. Zdravko Babić, MD, PhD.

Parallel with great scientific and professional advances in the treatment of acute coronary syndrome (ACS) under the leadership of the WGACS existing centers of interventional cardiology in 2005 started gradually to organize the Croatian Primary Percutaneous Coronary Intervention (pPCI) Network extending responsibility for treatment on patients transported from the surrounding county hospitals in the acute phase of myocardial infarction (AMI) covering over then 90% of Croatian territory today.

The results of this network are internationally recognized, were comparable with those countries which have significantly higher gross domestic product, and the Republic of Croatia is among the countries with the best-organized treatment of AMI in Europe, and therefore in the world. The results are evident in the statistical indicators of the Croatian Institute for Public Health which indicated that the mortality of cardiovascular diseases in Croatia in the last ten years, accordingly with establishment of quoted network, reduced from 50.3% to 48.1%, mainly as a result of reduced mortality from AMI.

The WGACS has organized since its inception continuing education of physicians, leaders of the WGACS participated as presenters, moderators and chairman of a number of domestic and international cardiology meetings, and were the authors of a number of professional and scientific articles in the field of cardiology. Further objectives of the WGACS are maintaining of the current level of activity, continuation of the cooperation with colleagues from different Croatian cardiac centers in organization of continuous registry of ACS and acute cardiac conditions in general in Croatia, following of the up-to-date knowledge in the treatment of acute conditions in cardiology and their implementation in everyday treatment of our patients.
