Из букв каждая команда должна была составить кодовое слово. Методом жеребьевки, все учащиеся были разделены на три команды. Будучи включенными в активную деятельность, учащиеся повторили настоящее совершенное время, которое, надо отметить, было усвоено на достойном уровне подавляющим большинством, пополнили свой словарный запас и приобщились к работе в группе, в результате которой даже более слабые ученики справились с заданием и на заключительном этапе урока правильно перевели предложения с русского языка на английский с использованием Present Perfect Continuous.

Суммируя вышеизложенное и подводя итог экспериментальной работы, которую мы имели возможность провести, мы можем заключить, что “Scavenger Hunt” или «Охота» является эффективной формой работы на уроке, которую стоит постепенно внедрять в образовательный процесс, так как она способствует развитию навыков XXI века.

Electronic portfolio: student's experience

*Nizhny Novgorod state engineering and economic university
 (Russia, Knyaginino)*

doi: 10.18411/lj-05-2020-320

idsp: ljjournal-05-2020-320

One of the most popular directions in the modern education system is the implementation of educational programs using e-learning and distance learning technologies of the educational system.

Today, a person needs to constantly learn, get something new to be an educated and sought-after specialist in the labor market. Currently, we have access to education through technology. Electronic textbooks are used as a source of information and a form of distance learning, which is very convenient not only for teachers and students, but also for parents.

Educational portfolios are a new form of control, a way of recording, accumulating and evaluating student achievements, as a means of motivating personal development.

Currently, in the age of information technology progress, many students are required to prepare some material about their life, their achievements and Hobbies. This material

allows you to determine the student's interest in certain types of activities, as well as their psychological characteristics. The student's desire for education is evaluated using the portfolio, [1].

The essence of such a document is an introduction to the personal qualities and achievements of a student who is studying in a particular course of an educational institution. It allows you to objectively look at your own life and actions, as well as plan and adjust your future fate.

A student is also a "non-specialist" who needs constant confirmation that he is developing without sitting still, mastering new horizons and projects. The portfolio will reflect this information. It is constantly updated with important elements.

It is worth noting that recently such a document as a portfolio is becoming more and more digitized. Educational portfolios are a special place created by educational institutions where students and teachers work together to accumulate, systematize, analyze and present their results and achievements to each student over a certain period of time.

In other words, the student can constantly add various applications to it. This is convenient. The electronic form of the portfolio can be compared to your own page in a social network. However, there are a number of differences. The page in the social network is more entertaining. A portfolio distributed at the University is an official business document that is informative and informative.

This document contributes to the following changes in the self-consciousness of not only students of higher education institutions, but also all people:

1. Motivation and incentive for further study and education;
2. Gaining tremendous experience in competition;
3. Incentive to improve your own skills;
4. The ability to independently assess the indicator of not only their own General, but also professional competencies.

The need to design a portfolio occurs in the following cases:

1. Promising work. If a student has found a job and can combine it with study, then representatives of the Dean's office only support this vital position. That's just how you might need a portfolio for work, as a way to get to know your new employee better.

In such cases, you need to focus on all your achievements and merits in the intellectual sphere.

2. Scientific work. If a student is engaged in scientific activities during their studies, they will definitely want to patent their invention in the future and tell the world about it. This is where you may need a portfolio that should be compiled correctly and concisely.
3. Participation in the Olympiad. Very often, the need for a portfolio arises when a student represents their own UNIVERSITY at the city or state level. In such cases, "the country should know its heroes", so teachers individually draw up this important document.
4. The Presidential scholarship is also considered a huge incentive, and not every student is destined to receive it. That is why it is necessary to know not only the names of the best, but also clearly define all their student achievements. But just for this and need a portfolio.
5. Personal goals. There are other areas of life and work where a portfolio is required. That is why it is best to prepare this document in advance, and it is desirable to check it together with the teacher. Use only if necessary, and describe all your achievements and merits in the content.

The portfolio has a structure. It consists of three parts: "document Portfolio", "work portfolio" and "feedback portfolio".

"Document portfolio" - a set of documented educational achievements, the possibility of qualitative and quantitative assessment of the portfolio.

"Portfolio of works" - refers to project, research, research papers, works in the field of art, and so on.

"Portfolio of reviews" - submission by the author (student-Creator of the work) of reviews of their work and reviews from other people. Examples can be: essays, letters of recommendation, a student's resume, or a review of an article.

The portfolio is made out in electronic and paper forms.

The paper version is collected in an individual folder, which records and accumulates the student's personal achievements in various activities (educational, industrial, scientific, creative, social, sports, etc.) for the entire period of study at the University. The paper version of the portfolio with the original documents is kept by the student. If desired, the student can add photos and video materials.

The electronic version is made using the PowerPoint program. The student independently records information about educational activities, participation in scientific, industrial activities, events, additional education, etc.

The documents application can contain copies of diplomas, certificates, certificates, certificates certified by the Deputy Director for Educational work, and scans of documents in electronic form.

The "works" application includes term papers, creative works, research papers, reports at scientific conferences, competitions, abstracts, printed works, etc. in electronic form in word or RDF format.

The application "reviews" can contain characteristics from the places of practice, letters of recommendation, reviews of student achievements, thank-you letters, etc. [2].

The electronic format of the portfolio at the Nizhny Novgorod state University of engineering and Economics is uploaded by students independently in the student's personal account in the electronic information educational environment [3].

The portfolio is the same autobiography, but this document does not reflect the daily life of the student, but his creative and scientific achievements during the period of study in higher education. A detailed description significantly simplifies the job search, facilitates the interview, and allows you to feel like a complete unit of society [4].
