Spoštovani in zvesti bralci ter naročniki Biltena!

Pred vami je prva številka v novi podobi, z novimi člani uredniškega odbora, ki smo si zastavili nove izzive pri izdajanju revije. Revija bo izhajala dvakrat letno v manjšem formatu.

Prenos izdajateljstva na Univerzo na Primorskem, Fakulteto za matematiko, naravoslovje in informacijske tehnologije Koper (UP FAMNIT), bo zagotovil še večjo vpletenost zdravstva v naravoslovno-tehnično okolje. Na fakulteti deluje pet študijskih smeri, v katerih poteka tako pedagoško in raziskovalno delo na področju bioinformatike, biopsihologije, matematike v ekonomiji in financah, računalništva in informatike ter aplikativne kineziologije. UP FAMNIT zaradi narave dela, ki ga opravlja, povezave v domačem in mednarodnem akademskem svetu, kar pomeni, da je možno revijo internacionalizirati, torej zanjo odpreti mednarodni trg in jo hkrati dodatno razširiti v slovenski akademski prostor. To tudi pomeni, da je s sodelovanjem moč povečati število naročnikov kot tudi možnih piscev člankov.

Bilt en je že skoraj dve desetletji vodilna strokovna revija treh področij – ekonomike, organizacije in informatike v zdravstvu – v slovenskem jeziku. Primerljive revije pokrivajo le eno ali največ dve področji posameznih strokovnih ali poslovnih področij. Široka pokritost naročnikov po večini zdravstvenih organizacij je osnova za prodorno predstavitev domačih izsledkov, članki s primerjavami z ostalimi zdravstvenimi sistemi pa ponujajo vpogled v dogajanja v širšem zdravstvenem prostoru EU.

Sama področja in vsebine prispevkov kot tudi sestava uredniškega odbora s predstavniki področja naravoslovja in ekonomije bodo zagotavljala usmeritev v merljivost, preverljivost in dokazljivost raziskav in člankov.

Področje ekonomike, organizacije in informatike se je v zadnjih letih razvijalo razpršeno, nesistemske in nestrateško. Bilt en bo s pokrivanjem treh ključnih področij prispeval k poenotenju znanstvenega pristopa na skupnem, presečnem področju. Visoko zastavljena merila strokovnosti člankov ter seznam uveljavljenih recenzentov v širšem mednarodnem področju bodo zagotavljali strokovnost razvoja. To bo obenem omogočalo uravnotežen razvoj vseh treh področij (ekonomika, organizacija, informatika) tudi na znanstveni ravni zdravstvenega sistema.

Ekonomika, organizacija in informatika so sestavni deli in orodja učinkovitih zdravstvenih sistemov, zato si brez njihovega napredka ni možno predstavljati razvoja in nadgradnje zdravstvenega sistema.

Upamo, da bomo z novo podobo in vsebinsko bogatimi članki še bolj pritegnili vašo pozornost in potešili vaše intelektualne potrebe s področja ekonomike, organizacije in informatike v zdravstvu, saj si želimo, da boste tudi v prihodnje (p)ostali naši zvesti bralci in pričakovani pisci člankov.

Petruša Miholič
izvršna urednica

Dear faithful readers and subscribers of Bulletin!

Before you is the first edition in the new image, with new members on the Editorial Board, setting ourselves new challenges in publishing this magazine. The magazine will now be published twice a year in a smaller format.

Transferring publishing to the University of Primorska, Faculty of Mathematics, Natural Sciences and Information Technologies Koper (UP FAMNIT) will provide even greater involvement of health in the natural science - technical environment. The faculty has five fields of study, with both teaching and research work in the field of bioinformatics, biopsychology, mathematics in economics and finance, computer science and information technology, and applied kinesiology. Due to the nature of their work, UP FAMNIT has links with both the national and international academic world, which means that the magazine can be internationalised, providing it with an international market and further expanding its presence in Slovenian academic space. Additionally, this means that with cooperation we can increase the number of subscribers and potential authors of articles.

For nearly two decades, Bulletin has been a leading professional journal in three fields - economics, organisation, and information technology in healthcare - in Slovene. Comparable magazines cover only one or two areas of individual professional or business fields. Our extensive coverage of subscribers in most health organisations is the basis for vigorous presentation of local research results, while our article comparisons with other healthcare systems offer insight on happenings in the broader EU health region.

The very areas and content of contributions as well as the composition of the editorial board with representatives from the fields of natural sciences and economics will ensure a focus on measurability, verifiability and traceability of research and articles.

Development in the field of economics, organisation and information technology has in recent years been scattered, unsystematically, and nonstrategic. By covering the three key areas, the Bulletin will contribute to the integration of scientific approach on a common, cross-sectional area. The high professional criteria for the articles and the list of established peer reviewers in the wider international arena will ensure professional development. This will also ensure the balanced development of all three fields (economics, organisation, information technology) in the scientific context of the healthcare system.

Economics, organisation and information technology are integral parts and tools of an effective healthcare system and without their progress, the development and upgrading of the healthcare system cannot be imagined.

We hope that with our new image and content-rich articles we will further attract your attention and quench your intellectual needs in the field of economics,

organisation and information technology in healthcare, as we wish that in the future you will remain (or become) our loyal readers.
