Bilten indeksiran v bazi Research Papers in Economics

Spoštovane bralke in bralci, naj vam najprej zaželim obilo informacijskih, organizacijskih in ekonomskih dogodivščin v letu 2012. Bilten bi lahko postal spremljevalec v vstopu v tele-zdravstveni prostor.

Zahvaljujoč neumorni izvršni urednici začenja revija Bilten leto 2012 z dobro novico za našo revijo, saj bo Bilten indeksiran v bazi Research Papers in Economics (<http://repec.org/>). To sicer (še) ne prinaša točk pri objavi članka našim raziskovalcem, zanesljivo pa prinaša večjo odmevnost naših člankov ter avtorjev tudi v tujini. Tako se je sklenilo uspešno začetno leto z dvema številka. V zadovoljstvo pospremljam z uvodnikom prvo številko v drugem letu.

Današnji časi so prežeti z negativnostjo, sprenevedanjem in celo pozabljivostjo. Kako lepo bi bilo skakljati v četrti dimenziji časa in primerjati izrečeno danes in takrat ... Bi zmogli toliko osebne odgovornosti, da bi se s tem soočili? Zgrešene projekcije, napačne napovedi, nevzdržni modeli ... Kako naprej? Promocija znanja in povezovanja, preskočimo na integrale! Ali zmoremo, ali znamo? Prepričan sem: da!

Preskočimo k vsebini tokratne številke Biltena. V uvodniku je predstavljen pogled na aktualno problematiko med avtorstvom in plagiatorstvom pri pisanju znanstvenih člankov. Našli boste vsebine s področja javno-zasebnega partnerstva v zdravstvu v Sloveniji, vzdržnosti in dolgoživosti mreže psihiatrične dejavnosti v Sloveniji s predlogom storitev na primeru otroške psihiatrije. Prebrali boste lahko o povezavi med višino cene uteži in uspešnostjo poslovanja bolnišnic v letih od 2006 do 2009 ter o teoretični omejitvi Grossmanovega modela. Tokratno številko sklenu razmišljanje o tem, kako se odzivamo na krizo. Torej veliko zanimivega, kar naj vas pritegne v proučevanje člankov.

Naj sklenem uvodnik s povabilom kolegov in strokovnjakov s področja informatike, ekonomike in organizacije v zdravstvu k objavljanju člankov.

Prijetno branje!

Dorjan Marušič
glavni urednik

Bulletin indexed in the Research Papers in Economics database

Dear readers, let me first wish you an abundance of information, organisational, and economic adventures in 2012. The Bulletin can represent a companion for entry into telehealth space.

Thanks to the tireless executive editor, the Bulletin launches into 2012 with good news for our magazine. The Bulletin will be indexed in the Research Papers in Economics database (<http://repec.org/>). This does not (yet) bring points to our researchers for publishing an article, but it certainly brings greater visibility abroad for our articles and authors. We have brought around this successful initial year with two issues, and I am happy to escort the first issue in the second year with an editorial.

Today's times are imbued with negativity, pretence at ignorance and even forgetfulness. How nice it would be to gambol in the fourth dimension of time and compare what is uttered today and what was uttered then... Could we handle so much personal responsibility to confront this? Missed projections, incorrect announcements, unsustainable models. How to proceed? The promotion of knowledge and integration; let us skip to integrals! Are we capable, do we know how? I believe so, yes!

Let us pass over to the content of this issue of the Bulletin. The editorial presents a view of the current issues between authorship and plagiarism when writing scientific articles. You will find content from the field of public-private partnerships in health care in Slovenia, the sustainability and longevity of the network of psychiatric activities in Slovenia with a proposal of services based on the case of child psychiatry. You can read about the relationship between cost of weights and the success of hospital performance from 2006 to 2009 and the theoretical limit of the Grossman model. This issue is concluded with speculation on how we respond to crisis. Therefore, a lot to pique your interest and draw you to study these articles.

Let me finish this editorial by inviting colleagues and experts from the fields of informatics, economics, and health care organisation to publish articles.

Pleasant reading!

Dorjan Marušič
