Texas

State Outlook

As Texas's population ages, older residents will play a critical role in the state's economic recovery and growth. Even after accounting for the impact of COVID-19, Texas's aging population will continue to make economic and social contributions that benefit people of all ages, and the growth of this age group will fuel innovation and new market solutions. Policymakers, business leaders, and elected officials must ensure programs and policies are in place to support and grow this economic engine.

Key findings:

Texas's 50-plus population creates outside economic impact and will drive economic growth for the next 30 years. In 2018, the 50-plus population accounted for 30% of Texas's population, yet contributed 37%—or \$647 billion—of the state's total GDP. Their activities also supported 7.1 million jobs and generated \$453 billion in wages and salaries. Their contribution to GDP is forecast to reach \$2.2 trillion in 2050—over 37% of the state's projected GDP—when people 50-plus will account for 37% of the population.

The purchasing power of Texas's 50-plus population will generate tax revenue for decades to come. In 2018, the market activities of people 50-plus supported \$40 billion in state and local taxes (32% of Texas's total). That figure will more than quadruple to \$172 billion by 2050.

Overview: Economic impact of the 50-plus population

	2018		2050	
	Impact	% of total	Impact	% of total
State GDP	\$647 billion	37	\$2,219 billion	37
Jobs	7.1 million	41	8.6 million	40
Wages and salaries	\$453 billion	44	\$1,453 billion	42
State and local taxes	\$40 billion	32	\$172 billion	37

"% of total" refers to 50-plus impact as a percentage of each category.

The 50-plus cohort will grow from 30% to 37% of the population by 2050

Texas

As a major source of Texas's consumer spending, 50-plus households will drive economic growth across sectors

Spending of the 50-plus population by product (\$ billion)

Please see Appendix 4 at <https://doi.org/10.26419/int.00042.003> for a complete description of each consumption product category.

Note: Education services include spending on education across all members living in the same household (consumption expenditures are recorded at the household level).

Unpaid contributions

Beyond their economic contributions, the 50-plus cohort also spends time engaging in vital activities like volunteering and caregiving for children and adults. The 50-plus population in Texas contributed \$7 billion in volunteering activities and \$44 billion in unpaid caregiving in 2018, with the average person spending 41 hours on volunteering and almost 470 hours on caregiving over the entire year.

The 50-plus population provides \$51 billion in unpaid contributions

Value of unpaid activities, 2018 (\$ billion)

(Values may not sum due to rounding)

■ Under-50 ■ 50-plus

50-plus households accounted for 50 cents of every dollar spent in Texas in 2018—this will grow to 57 cents (57%) by 2050

50-plus share of every dollar spent, for select categories (%)

The market activities of Texas's 50-plus population create jobs, wages, and salaries

In 2030, the 50-plus population's activities will support 7.5 million jobs in Texas, driving employment growth across all age groups and industries. Most of these jobs will be created in health services; wholesale and retail trade; professional and business services; and finance, insurance, and real estate (see chart on right).

Labor force: People age 50-plus will continue to play a significant role as part of Texas's workforce: by 2030, 50-plus workers in the state are projected to number 4.6 million, representing 31% of the state's total labor force.

Which sectors will see biggest jobs impact in 2030?

Number of jobs supported by 50-plus activities and % of sector

Methodology: This state profile details the contribution of the 50-plus population, both in-state and through interstate commerce, to Texas's economy. The overall impact includes the direct effects of their spending, work contributions, and taxes paid. It also includes the ripple effects this generates—via business supply chains and through the wages and spending of other workers. All forecasts account for the effects of COVID-19 on U.S. demographic and economic projections. These forecasts were informed by data from the Centers for Disease Control and Prevention, the Bureau of Economic Analysis, Bureau of Labor Statistics, and The Economist Intelligence Unit's macroeconomic forecasts. For further details see: <http://www.aarp.org/longevity>.
