Obituary

Professor Emeritus Ivan Jurković (1917–2014)

doi: 10.4154/gc.2015.12

Geologia Croatica

Ivan Jurković, Professor emeritus of the Geology of Ore Deposits at the Faculty of Mining, Geology and Petroleum Engineering, University of Zagreb, died peacefully, in his home in Zagreb on 30 December 2014 at the age of 97. He was the leading mineral resource geologist in the countries of the former Yugoslavia where he pioneered both the use of ore microscopy in the study of ore deposits and the understanding of their genesis in the relation to the global tectonic paradigm. He devoted a great part of his time to the community, working tirelessly to develop many projects which promote the public good, education and science, holding a number of important political functions in the Croatian Parliament and government and serving, among others, as rector of the University of Zagreb. With his death, geological science in Croatia lost one of its most outstanding scientists.

Professor Jurković was born on 27 March 1917 in Ogulin in Croatia. He attended elementary school and a gymnasium in Zagreb and entered the University of Zagreb, Technical Faculty (Department of chemical engineering) in 1935 to study chemistry. He graduated in 1939 but became interested in geology and continued his study at the University of Zagreb, Faculty of Humanities and Social Sciences (Department of geology). He received his PhD with a thesis entitled „Mineral parageneses from the Mid Bosnian Schist Mountains with the special reference to gold-bearing mercuran tetrahedrite“ in 1956 and completed his habilitation in 1957 at the University of Zagreb (Technical Faculty).

Professor Jurković became an assistant in the Mineralogical-geological institute of Technical Faculty at the University of Zagreb in 1939, but during the second World War (between 1942 and 1945) he volunteered in this institute under the supervision of professor Miroslav Tajder. From 1945 professor Jurković was employed continuously in the Mineralogical-geological institute (today the Department for mineralogy, petrology and mineral resources of Faculty of Mining, Geology and Petroleum Engineering, University of Zagreb) until his retirement in 1987. He attained the position of an assistant (1945–1957), assistant professor (1957–1959), associate professor (1959–1963) and full professor (1963–1987). From 1965 to 1968 professor Jurković worked in the United Nations as a principal geologist on prospecting mineral resources in Tunisia and additionally in 1966 he became adviser to the United Nations in Benin, Togo and Eastern Morocco. During this time he fulfilled all his duties as a university professor by using his holidays. Professor Jurković served as a rector of the University of Zagreb between 1978 and 1982 and as the president of the Council of the University of Zagreb from 1982 to 1984. The title *Professor emeritus* was conferred on him by the Senate of the University of Zagreb in 2000.

In the optical laboratory of dr. Arnold Cissarz, the former executive officer of the Geological Bundesanstalt in Hannover, who afterwards worked in Belgrad, professor Jurković came into contact with qualitative and quantitative (Berek) ore microscopy methods in 1949. Upon the personal invita-

tion of professor Paul Ramdohr, the most remarkable world mineralogist and specialist in ore microscopy, professor Jurković spent the summer semester of 1957 in his Department of Geology at University of Heidelberg studying polished sections of rare ore minerals from professor Ramdohr's collection. The experience, obtained during collaborative work with dr. Cissarz and professor Ramdohr in ore microscopy, together with field knowledge developed in the 2–3 month long geological field campaigns under the leadership of his mentors professor Luka Marić (Technical Faculty, University Zagreb), professor Mirloslav Tajder (Faculty of Natural sciences, University of Zagreb) and professor Stojan Pavlović (Faculty of Mining and Geology, University of Belgrade), and his field work in Tunisia, laid the foundation for the later remarkable achievements of professor Jurković as a teacher and researcher.

Professor Jurković had a broad knowledge across earth science as a whole. Accordingly, his scientific activity extended over mineralogy, geochemistry, petrology and metallic and nonmetallic ore deposits, but certainly his most important scientific work was in the field of ore deposits and metallogeny. He devoted much of his time to original field work, ore microscopy and chemical analyses in the laboratory which included classical chemical analysis, spectrographic analysis, Debey-Scherrer roentgen analysis, infrared spectroscopy, differential thermal analysis, thermogravimetric analysis, isotopic analyses of oxygen, carbon, sulphur, strontium and lead, fluid inclusion analysis, trace element analysis including rare earth elements, and also electron and proton microprobe analyses. His geological field campaigns were located in Croatia, Bosnia and Herzegovina, Slovenia, Kosovo, Serbia, Macedonia, Greece, Myanmar, India, Pakistan, Indonesia, Egypt, Tunisia, Benin, Togo, Morocco and Venezuela. As an author or co-author, he published 166 scientific papers and 38 professional papers.

The ore deposits which professor Jurković researched in detail and prepared for exploitation include the big copper deposit of Monywa in Myanmar, gold bearing copper deposits in the Indonesian islands of Sumatra and Sulawesi, a Tertiary lead-zinc deposit Oum Geigh in Egypt, lead-zinc-bearing barite fluorite deposits on the El Kef region in Tunisia and lead-zinc deposits at Djebel Azered in Tunisia. He also investigated barite deposits in the Lika, Gorski Kotar and Petrova Gora Mt., copper bearing siderite deposit of Gradski Potok and lead-zinc-bearing siderite deposit Zrin in the Trgovska gora Mt., the hematite ore deposit Bukovica in Petrova gora Mt., the pliocene limonite deposit of Meterize in Trgovska gora Mt., magnetite-hematite occurrences in Adolfovac in Zagrebačka Gora Mt., bauxite deposits in Northern Dalmatia, metasomatic monomineral barite deposits in the Devonian carbonate rocks in the Mid Bosnian Schist Mountains (Tarčin, Kreševo, Kiseljak, Brestovsko, Fojnica, Deževica, Dusina, Sabiljine Pećine, Rostovo), vein mercurian-tetrahedrite-bearing barite-siderite deposits in Mačkara and Mračaj deposits, pyrite-siderite gold vein deposit Baković (Fojnica), silver-bearing zinc-antimony deposit Čemernica (Fojnica), cassiterite-bearing magnetite, pyrrhotite, lead-zinc deposit Vrtlašće (Fojnica), realgar and

orpiment deposit Hrmza (Kiseljak), magnetite hematite, siderite, ankerite, chalcopyrite and arsenopyrite deposit Mačje jame, lead-zinc-copper bearing barite deposits in the Prača region in Southeastern Bosnia, bauxite deposits in the former Yugoslavia and evaporites in the Western Dinarides.

The topics to which professor Jurković made the most important contributions include: detailed mineral, chemical and isotopic analyses of silver and gold-bearing mercurian tetrahedrite and barite, having an important role in the development of the model of ore genesis in the Mid Bosnian Schist Mountains, petrological characterization of palaeozoic rhyolite from the Vranica Mt. and Triassic gabbro-diorite from Radovan Mt. in collaboration with professor Vladimir Majer, the classification of magnezite deposits of Dinarides on the basis of isotopic analyses of oxygen and carbon in collaboration with dr. Jakob Pamić, the first stratigraphic and paragenetic classification of bauxite deposits in former Yugoslavia in collaboration with dr. Krešimir Sakač, stratigraphic division of gypsum deposits in former Yugoslavia in collaboration with professor Dubravko Šiftar. His classification of all the known deposits in the Republic Croatia on the basis of Stille-Bilibin theory was especially valuable. After he retired, professor Jurković remained actively engaged in scientific work and pursued his activities with undiminished energy. In the last 7 years he published 8 scientific papers, being the first author of 6 papers. It should be pointed out that the Mid Bosnian Schist Mountains was an area of special interest to professor Jurković, where he found and described 276 ore deposits and occurrences in the scope of his dissertation. In the last seven years professor Jurković again intensively investigated this area introducing modern analytical methods aiming to provide new insights into the chemistry of ore minerals and the age of the rhyolite as well as to develop the most comprehensive model of the genesis of ore deposits. Until his last breath he worked on this model. He exerted a great influence on the development of metallogeny in all the countries of the former Yugoslavia.

Under the leadership of professor Jurković at Faculty of Mining, Geology and Petroleum Engineering, University of Zagreb, the first „school“ for researchers of metallic and non-metallic deposits was initiated. Besides the many courses he taught, professor Jurković introduced a new one „Ore microscopy“, and started, (as a first in the former Yugoslavia), to give lectures related to optical quantitative investigations of opaque minerals in reflected polarized light according to the Berek method. He was also the first in the former Yugoslavia to introduce plate tectonics into his lectures regarding the genesis of ore deposits in the frame of the course „Ore deposits“. He welcomed and mentored numerous students and geologists from Croatia and other countries of the former Yugoslavia, illuminating with stark clarity the fundamental principles of ore deposits. He had a tremendous impact on the learning and professional growth of many geologists. Professor Jurković literally emanated a great experience and enthusiasm in the classroom and was without the doubt the best professor the Faculty of Mining, Geology and Petroleum Engineering, University of Zagreb, ever had.

Due to his highly developed sense of responsibility for community, professor Jurković became engaged in numerous activities in addition to his academic work. He was very successful in leadership positions and served as the head geologist and the director of the Institute of Mining and Geology in Croatia (1947–1949), as the head geologist in the Ministry of Ferrous and Nonferrous Metallurgy of the Federal Government of Yugoslavia (1949–1951) and as a counsellor at the federal and republic level for nuclear resources and geological research abroad. Always seeking a new challenge to improve the public good, professor Jurković, together with professor Stjepan Težak, initiated the first Committee for Computing, from which later came the idea to build the University Computing Centre (SRCE) for the University of Zagreb and other research institutions. As the president of the Committee for building four capital cultural institution in Croatia (1977–1988) professor Jurković significantly contributed to the building of the National and University Library, for which he and professor Andre Mohorovičić laid the foundation stone in 1988. Many other important public projects, including the Bjelolasica Ski Resort, Molecular Biology Centre in the Franciscan Monastery Rožat in Dubrovnik and Astronomical Observatory on Hvar were accomplished due to the enormous energy and labour of professor Jurković. As a rector, he increased the number of postgraduate studies, the number of national scholarships and co-financing for professors from Eastern Europe in the Inter-University Centre of Postgraduate Studies (IUC) in Dubrovnik and organized the construction of the dormitory in the IUC building.

Between 1940 and 2000 professor Jurković realized 83 shorter (one week) or longer official journeys in foreign countries. He visited most European countries, Asia (Myanmar, India, China, Turkey, Philippines, Singapore, Thailand), Africa (Egypt, Tunisia, Nigeria, Benin, Togo, Morocco), South America (Venezuela, Brazil), Middle America (Jamaica, Dominican Republic, Mexico) and North America (Florida, Washington City, Indiana, California, Los Angeles).

Professor Jurković was extremely active in different domestic and foreign scientific and professional societies. He was a member of the Croatian geological society (in one mandate president and member of Executive committee), a member of the Croatian biological society, a secretary and vice-president of the Croatian society of natural sciences, a member of the German mineralogical society, a president of the Norwegian-Yugoslav friendship society, a member of the Society for applied geology deposits, a member of the Union of geosciences, a member and president of the International Committee for study of bauxite, alumina and Al-oxides, a member of the International Association on the genesis of the ore deposits, a member of the administrative board (Executive Committee) of the International Association of the Universities, to mention only a few.

He was a corresponding member of the Croatian Academy of Sciences and Arts (former Yugoslav Academy of Sciences and Arts) from 1963 and became a full member in 1969. He contributed greatly to the advancement of this institution being a member of its Presidium (1969–1972) and

a member of its associations, committees and councils such as the Croatian Crystallographic Association, Geochemistry Committee and acting as the first president of the Scientific Council for Telemetry and Scientific Council for Crude Oil and Gas. From 1973 he became also a corresponding member of the Academy of Sciences and Arts of Bosnia and Herzegovina.

His sense for community was also reflected in his activity on the editorial boards of numerous scientific journals (Geološki vjesnik, Acta geologica, Rudarstvo, Sveučilišni vjesnik, The Florida State University Proceeding and Reports, Theoprastus Contributions to Advanced studies in Geology).

During his long and fruitful career, Professor Jurković won many honors and medals. He received the prestigious Order of Danica Hrvatska for science (2012), Order of the Republic of Croatia with golden wreath (1987), Order of merits for the people with golden star (1977), Order of the Republic of Croatia with silver wreath (1974), Order of labour with golden wreath (1964), Order of labour with silver wreath (1953) and Medal for merits for the people (1948). He was an honorary member of five professional societies and received many other honours, including 32 plaquettes and charters of numerous notable Croatian institutions and faculties. The achievements of professor Jurković, as a scientist and a public server, were recognized in many foreign countries whose governments invited him to be a guest, for instance the German government in 1974 and the French government in 1977, and where he obtained medals from ten different universities.

Professor Jurković was an extraordinary and incredibly inspiring professor, an admired orator and a researcher of exemplary diligence. He furthered our knowledge and was supportive of anyone who wanted to learn. Due to his scientific enthusiasm and dedication to the work, brilliant intelligence and extremely good memory which allowed him to make the best possible coordination of all his observations, he earned the respect and admiration of all his colleagues. He was an academic giant and a highly influential personality. The numerous contributions of professor Jurković to both academic and overall public life mean that he will be much missed and never forgotten.

Vesnica Garašić and Goran Durn

BIBLIOGRAPHY

SCIENTIFIC PAPERS (CURRENT CONTENTS)

- JURKOVIĆ, I., PALINKAŠ, L., GARAŠIĆ, V. & STRMIĆ-PALINKAŠ, S. (2012): Genesis of vein-stockwork cryptocrystalline magnesite from the Dinaride ophiolites. – *Ofioliti*, 37/1, 13–26.
- PAMIĆ, J., BALOGH, K., HRVATOVIĆ, H., BALEN, D., JURKOVIĆ, I. & PALINKAŠ, L. (2004): K-Ar and Ar-Ar dating of the Palaeozoic metamorphic complex from the Mid-Bosnian Schist Mts., Central Dinarides, Bosnia and Herzegovina. – *Mineralogy and Petrology*, 82, 65–79.

- PAMIĆ, J. & JURKOVIĆ, I. (2002): Palaeozoic tectonostratigraphic units of the northwest and central Dinarides and the adjoining South Tisia.– International Journal of Earth Sciences, 91, 538–554.
- JURKOVIĆ, I. (1960): Quecksilberfahlerz vom Mačkara gang bei Gornji Vakuf in Bosnien (Jugoslawien).– Neues Jhrb. d. Mineral., Abh. 94, 539–558.

SCIENTIFIC PAPERS IN OTHER JOURNALS

- GARAŠIĆ, V. & JURKOVIĆ, I. (2012): Geochemical characteristics of different limonite ore types from the Southern Tomašica iron deposits, NW Bosnia.– Geologia Croatica, 65/2, 255–270.
- JURKOVIĆ, B. I., GARAŠIĆ, V. & JURKOVIĆ, M. I. (2011): Geochemical characteristics of mercurian tetrahedrite, barite and fluorite from the barite deposits Duboki Vagan and Dubrave-Dugi Dol, south of the town of Kreševo, Mid-Bosnian Schist Mountains.– Geologia Croatica, 64/1, 49–59.
- JURKOVIĆ, B. I., GARAŠIĆ, V. & JURKOVIĆ, M. I. (2011): Cobalt, nickel, tungsten, cadmium, silver and gold-bearing mercurian tetrahedrite from the Sasky Rad barite – siderite deposit in the Mid-Bosnian Schist Mts.– Geologia Croatica, 64/3, 223–237.
- JURKOVIĆ, I., GARAŠIĆ, V. & HRVATOVIĆ, H. (2010): Geochemical characteristics of the barite occurrences in the Paleozoic complex of the Southeastern Bosnia and their relationship to the barite deposits of the Mid-Bosnian Schists Mountains.– Geologia Croatica, 63/2, 241–258.
- JURKOVIĆ, I. (2007): Polymetallic sulphide occurrences in the Upper Paleozoic complexes of Northern Montenegro.– Rudarsko-geološko-naftni zbornik, 19, 11–16.
- JURKOVIĆ, I. (2006): Geology and metallogeny of the Drina–Ivanjica metamorphic complex in Eastern Bosnia–Western Serbia.– Rudarsko-geološko-naftni zbornik, 18, 43–61.
- JURKOVIĆ, I. (2005): Magnetite-hematite iron ore occurrences in the Triassic–Paleozoic metamorphic complex of Medvednica Mountain, Croatia.– Rudarsko-geološko-naftni zbornik, 17, 1–14.

Internacionalni simpozij – Dubrovnik 1979. Republički Komitet za znanost, tehnologiju i informatiku, Zagreb, 1980, 1–5.

KNIEWALD, Z. & JURKOVIĆ, I. (1979): Značenje znanstvenog rada u prehrani i prehrambenoj industriji [Character of the scientific investigation in nutrition and in the nutritional industry – in Croatian]. – Agronomski glasnik, 5–6, 697–704.

JURKOVIĆ, I., SAKAČ, K., BODRUŽIĆ, D., ELERŠEK, I., GABRIĆ, A., GRANDIĆ, S., KOVAČEVIĆ, S., ŠINKOVEC, B. & ŠUŠNJARA, A. (1979): Studija o dugoročnom istraživanju boksa u Sjevernoj Dalmaciji [Study of long term investigation of boxites in the North Dalmatia – in Croatian]. – Nosilac projekta “Industrijski projekt”, a suradnici Geološki zavod Zagreb, Geofizika, Jadral Obrovac i RGN fakultet Zagreb. Studija je izrađena za Komisiju Republičkog Savjeta za naučni rad i poduzeće Jadral, Jadranski aluminijski Obrovac.

JURKOVIĆ, I. & ŠINKOVEC, B. (1978): Razvoj geologije rudnih ležišta u SR Hrvatskoj u proteklih 25 godina (1951–1976) [The development of the ore geology in SR Croatia during last 25 years (1951–1976) – in Croatian]. – Symposium on the occasion of 25 years of Croatian geological society. Geol. vjesnik, 30/2, 649–655.

JURKOVIĆ, I. & ADAMČIĆ, B. (1977): Samoupravne interesne zajednice znanosti [Selfmanaging scientific communities – in Croatian]. – Samoupravno interesno organiziranje, Zagreb, 211–227.

JURKOVIĆ, I. & MAJER, V. (1975): Spomenica u počast akademiku Luki Mariću prigodom 75-godišnjice života [Memorial to honour the 75th anniversary of the life of academician Luka Marić – in Croatian]. – JAZU, Acta Geologica, Prirodoslovna istraživanja, 41, 8, 1–25.

MARIĆ, L., ŠINKOVEC, B. & JURKOVIĆ, I. (1973): Mineralne sirovine Like i perspektive njihova korištenja. [Mineral resources in the Lika region and the perspective of their using – in Croatian]. – Simpozij “Lika u prošlosti i sadašnjosti”. JAZU, Zbornik, 5, 87–97.

JURKOVIĆ, I. (1970): Uvodni pozdravni govor na 7. kongresu geologa SFRJ [Introductory speech on 7. Geological congress of Yugoslav geologists – in Croatian]. – Knjiga 1, str. 1–8.

JURKOVIĆ, I. (1969): Uvodna riječ na Osnivačkoj skupštini Znanstvenog savjeta za naftu pri JAZU [Introductory speech on the Inaugural Constitution of the Scientific Council for oil, JAZU – in Croatian]. – JAZU, Posebni radovi, 1, 11–13.

MAJER, V. & JURKOVIĆ, I. (1969): Povodom 70-godišnjice rođenja akademika Luke Marića [The 70th anniversary of the birth of Academician Luka Marić – in Croatian]. – Geol. vjesnik, 22, 573–575.

PUBLIC LECTURES

- PALINKAŠ, L. & JURKOVIĆ, I. (1993): Značaj istraživanja rijetkih zemalja i fluidnih inkluzija u fluoritima iz Kreševa, Bosna [*The importance of the investigations of the rare earth elements and fluid inclusions in fluorite minerals from Kreševo, Bosnia* – in Croatian]. – Odbor za geokemiju HAZU, Zagreb, 1993.
- JURKOVIĆ, I., DRAGIČEVIĆ, I. & POKRAJČIĆ, I. (1990): Ležišta boksita u pokrajini Oruro, Brazil [*Bauxite ore deposits in the Oruro area, Brazil*]. – Hrvatsko geološko društvo, Zagreb, 1990.
- JURKOVIĆ, I. (1983): Selection of the University Professors. The role of the University. Introductory exposition. – Round table: Position and organization of Universities – Managing Problems. – C.R.E. Genève and Yugoslav Universities, Dubrovnik, 22–24.08.1983.
- JURKOVIĆ, I. (1966): Gîtes plombo-zincifères du Djebel Azered, Tunisie Centrale. Leçon invitée tenue sur le Symposium sur le plomb et zinc en Afrique organisé par l'Association des géologues africains. – Tunis, 1966.
- JURKOVIĆ, I. (1959): Olovno–cinkana ležišta između Qosseir i Marsa Alan na obali Crvenog Mora u Egiptu. [*Lead–zinc ore deposits between Qosseir and Marsa Alan on the Red Sea shore, Egypt* – in Croatian]. – Hrvatsko geološko društvo, Zagreb, 29.05.1959.
- JURKOVIĆ, I. (1959): Pojave kobaltnih i nikalnih minerala u Trgovskoj gori [*Cobalt and nickel ore occurrences in the Trgovska gora Mt.* – in Croatian]. – Hrvatsko geološko društvo, Zagreb, 13.02.1959.
- JURKOVIĆ, I. (1958): Sedimentna ležišta barita kod Ričice i Pilara u Lici [*Sedimentary barite deposits at Ričice and Pilar villages in Lika* – in Croatian]. – Hrvatsko geološko društvo, Zagreb, 10.01.1958.
- JURKOVIĆ, I. (1957): O osnovnom gorju u području Petrove Gore na temelju mikroskopskih ispitivanja paleozojskih naslaga [*Results of microscopic investigation of the Paleozoic sediments in Petrova Gora Mt.* – in Croatian]. – Hrvatsko geološko društvo, Zagreb, 22.03.1957.
- JURKOVIĆ, I. (1957): Sedimentan način postanka baritnih ležišta u paleozoiku Gorskog Kotara. [*Sedimentary origin of the barite deposits in the Paleozoic in Gorski Kotar region.* – in Croatian]. – Hrvatsko prirodoslovno društvo, Zagreb, 15.02.1957.
- JURKOVIĆ, I. (1956): Geneza i parageniza kontaktno–pneumatolitskog piroitinsko–halkopiritskog ležišta Nankesan u Sjevernoj Burmi (Mianmar) [*Genesis and paragenesis of the contact–pneumatolytic pyrrhotite chalcopyrite deposit Nankesan in the Northern Burma (Myanmar)* – in Croatian]. – Hrvatsko geološko društvo, Zagreb, 23.11.1956.
- JURKOVIĆ, I. & FERENČIĆ, A. (1956): Osnovne karakteristike metalogenog područja Korduna [*Basic characteristics of the metallogenic region of Kordun* – in Croatian]. – Hrvatsko prirodoslovno društvo, Zagreb, 11.05.1956.
- JURKOVIĆ, I. (1947): O vulkanima [*The volcanos* – in Croatian]. – Hrvatsko prirodoslovno društvo, Zagreb, 1947.
- JURKOVIĆ, I. (1946): Ima li života u Svemiru? [*Is there life in Cosmos?* – in Croatian]. – Hrvatsko prirodoslovno društvo, Zagreb, 1946.
- JURKOVIĆ, I. (1946): Građa Sunčeva sistema [*The structure of the Solar system* – in Croatian]. – Hrvatsko prirodoslovno društvo, Zagreb, 1946.

STUDENT SCRIPTS

- JURKOVIĆ, I. (1987): Mineralna ležišta u svjetlu teorije globalne tektonike ploča [*Mineral deposits and Global Plate Tectonics* – in Croatian]. – Skripta za studente geologije i rudarstva, Rudarsko-geološko-naftni fakultet, Sveučilište u Zagrebu, 1987, 1–124.
- JURKOVIĆ, I. (1986): Nauka o rudištima. Part II – Magmatska rudna ležišta [*Ore deposits. Part II – Magmatic ore deposits* – in Croatian]. – Skripta, Rudarsko-geološko-naftni fakultet, Sveučilište u Zagrebu, 1986, 1–181.

- JURKOVIĆ, I. & VRAGOVIĆ, M. (1983): Ležišta nemetalnih sirovina [*Nonmetallic ore deposits* – in Croatian]. – Priručna skripta za studente geologije i kemije, Rudarsko-geološko-naftni fakultet, Sveučilište u Zagrebu, 1–95.
- JURKOVIĆ, I. (1983): Translation of some english scientific booklet for students of Geology and Mining: “Origin of oceans” of E. Bullard (1969) and “Bottoms of deep oceans” of H.W. Menard (1969). – Rudarsko-geološko-naftni fakultet, Sveučilište u Zagrebu, 1983.
- JURKOVIĆ, I. (1983): Translation of some english scientific booklet for students of geology and mining: “Break of Pangea” of R.S. Dietz – J.C. Holden (1970) and “Geosynclinales”, “Mountains and origin of continents” of R.S. Dietz (1972). – Rudarsko-geološko-naftni fakultet, Sveučilište u Zagrebu, 1983.
- JURKOVIĆ, I. (1982): Upotreba minerala. Mineralne sirovine u poljoprivredi. Drago i plemenito kamenje. Upotreba minerala u industriji na temelju njihovih specijalnih fizikalnih i fizičko-kemijskih svojstava. Mineralne sirovine u industriji stakla, keramike i porculana [*Uses of the minerals. Minerals used in the agriculture. Precious stones The uses of minerals in the industry on the basis of their special physical and chemical properties. Minerals used in the industry of glass, ceramic and porcelain* – in Croatian]. – Rudarsko-geološko-naftni fakultet, Sveučilište u Zagrebu, 1982.
- JURKOVIĆ, I. (1982): Sedimentna rudna ležišta [*Sedimentary ore deposits* – in Croatian]. – Skripta, Rudarsko-geološko-naftni fakultet, Sveučilište u Zagrebu, 1982, 1–45.
- JURKOVIĆ, I. (1958): Istraživanje kristala rentgenskim zrakama [*The investigation of the crystals by röntgen rays* – in Croatian]. – Skripta za studente kemije i geologije. Drugo izdanje. Tehnički fakultet, Sveučilište u Zagrebu, 1958, 1–52.
- JURKOVIĆ, I. (1948): Istraživanje minerala rentgenskim zrakama [*The investigation of the minerals by röntgen rays* – in Croatian]. – Skripta za studente kemije i geologije. Tehnički fakultet, Sveučilište u Zagrebu, 1948, 1–70.
- JURKOVIĆ, I. (1946): Tabelarna dioba minerala prema suhim kemijskim reakcijama (24 tabele) [*Tables of minerals based on dry chemical reactions (24 tables)* – in Croatian]. – Priručnik za studente kemije, geologije i rudarstva. Klub studenata tehnike “Niko Tomić”, Zagreb, 1946.
- JURKOVIĆ, I. (1946): Praktikum za istraživanje minerala [*Practicum for the investigation of minerals* – in Croatian]. – Skripta za studente kemije, geologije i rudarstva. Klub studenata tehnike “Niko Tomić”, Zagreb, 1946., 1–157.

REMEMBRANCES

- JURKOVIĆ, I. (2004): In memoriam (Obituary): Dr. sc. Jakob Pamić, 10.09.1928–06.03.2004. – Nafta, 55/4, 153–154.
- JURKOVIĆ, I. (2004): In memoriam (Obituary): Stylianos Savvas Augustithis (1931–2001). – Ljetopis HAZU za godinu 2003, 107, 415–416.
- JURKOVIĆ, I. & ŠČAVNIČAR, S. (2001): Stylianos Savvas Augustithis, životopis – znanstvena djelatnost [*Stylianos Savvas Augustithis, biography and scientific activity* – in Croatian]. – Ljetopis HAZU, 104, 553–554.
- JURKOVIĆ, I. (1990): Božidar Zalokar. Nekrolog [*Božidar Zalokar. Obituary* – in Croatian]. – Geol. vjesnik, 43, 230–231.
- JURKOVIĆ, I. & MAJER, V. (1985): Paul Ramdohr (1890–1985), nekrolog [*Paul Ramdohr (1890–1985), obituary* – in Croatian]. – Ljetopis JAZU, 89, 434–438.
- JURKOVIĆ, I. (1982): Akademik Stojan Pavlović (1903–1981), nekrolog [*Academician Stojan Pavlović (1903–1981), obituary* – in Croatian]. – Ljetopis JAZU za godinu 1981, 85, 408–410.
- JURKOVIĆ, I. (1981): Nekrolog akademiku Luki Mariću (1899–1979) [*Obituary: Academician Luka Marić (1899–1979)* – in Croatian]. – Spomenica preminulim academicima, JAZU, 10, 15–19.

PAPERS RELATED TO THE UNITED NATIONS PROJECTS

- JURKOVIĆ, I. (1968): Gîtes plombo-zincifères du Djebel Azered, Partie troisième: Partie septentrionale.– Monographie “Prospection minérale du Bassin de la Foussana, Tunisie Centrale”. Fond Spécial des Nations Unies, New York, 1968, 181–254.
- JURKOVIĆ, I. (1968): Gisements plombo-zincifères du Djebel Azered. Deuxième partie, partie méridionale du Djebel Azered.– Monographie “Prospection minérale du Bassin de la Foussana, Tunisie Centrale”. Fond Spécial des Nations Unies, New York, 1968, 163–180.
- JURKOVIĆ, I. (1968): Gisements plombo-zincifères du Djebel Azered, Tunisie. Première partie: Stratigraphie et Tectonique. Dolomitisation et silicification. Age de minéralisation.– Monographie “Prospection minérale du Bassin de la Foussana, Tunisie Centrale”. Fond Spécial des Nations Unies, New York, 1968, 136–162.
- JURKOVIĆ, I. & NOUVEL, J. (1968): Gisements plombo-barytiques de Bou Ghanem el Guedim, Tunisie.– Monographie “Prospection minérale du Bassin de la Foussana, Tunisie Centrale”. Fond Spécial des Nations Unies, New York, 1968, 132–135.
- JURKOVIĆ, I. (1968): Gisements plombo-zincifères du Djebel Hamra, Tunisie.– Monographie “Prospection minérale du Bassin de la Foussana, Tunisie Centrale”. Fond Spécial des Nations Unies, New York, 1968, 51–131.
- JURKOVIĆ, I. (1968): Gîtes plombo-calaminaires d’Ain Nouba, Tunisie.– Monographie “Prospection minérale du Bassin de la Foussana, Tunisie Centrale”. Fond Spécial des Nations Unies, New York, 1968, 36–50.
- GHOZI, T. & JURKOVIĆ, I. (1968): Gîtes plombés de Sidi bou Lâaba, Tunisie.– Monographie “Prospection minérale du Bassin de la Foussana, Tunisie Centrale”. Fond Spécial des Nations Unies, New York, 1968, 23–35.
- TERRÉE, P. & JURKOVIĆ, I. (1968): Géochimie Stratégique du Djebel Semmama, Tunisie.– Monographie “Prospection minérale du Bassin de la Foussana, Tunisie Centrale”. Fond Spécial des Nations Unies, New York, 1968, 17–22.
- JURKOVIĆ, I. (1968): Gisements de calamine ferrugineuse du Plateau de Bled Zelfane, en Tunisie Centrale, Afrique.– Monographie “Prospection minérale du Bassin de la Foussana”. Fond Spécial des Nations Unies, New York, 1968, 1–16.
- JURKOVIĆ, I. (1966): Les pegmatites du Togo Central entre Atakpamé et Sokodé: Pegmatites et aplites en liaison, avec des migmatites et anatexites du Togo méridional; Phénomènes du métamorphisme de contact, Togo (Benin) Afrique. Lomé.– Nations Unies, UNDP, édition, New York, 1966.
- JURKOVIĆ, I. (1966): Les indices de pyrite de Yokélé, Togo (Benin), Afrique.– Nations Unies, UNDP édition, New York, 1966, 1–10.
