I have the honor to address the 126 critical problems raised by Shanghai Jiao tong University and Chief Editor of Science in celebrating the university's 126 anniversary [1-5].

My humble opinions and comments are as follows:

1. The door-opening policy must be the key for a university to educate or train its students.
2. The imagination is more important than knowledge, as pointed out by the world most famous scientist Albert Einstein.
3. Keep asking some critical but unrealistic or “stupid” questions thought by most people, such as why the “time” is always moving from one direction to the other; what happens if it is opposite to that.
4. It is also very important to follow the “5-steps rule” (Fig. 1), particularly in dealing with molecular biology or molecular biomedicine systems.
