Editorial

I was thinking of finding what I would discuss in a 2 page new Editorial as I have several matters to say and then destiny made it easy by suddenly receiving three invitations to be nominated for three global awards. So, I have emphasized to write this paper highlighting the story from the start behind these invitations. This is the most recent upshot presage of success I gained after a one year journey from the fighting of COVID-19 pandemic by my unmatched notion to warfare the virus during the world shutdown and staying at home by acting from my home desk [1].

The three global awards are: two from an esteemed American Global Association for the Advancement of Science; the first one honor scientists whose exemplary actions have demonstrated scientific responsibility in challenging circumstances, while the second awards scientists whose ideal work have proved advancement of science. The announcement about the third prize I received was from an Italian respected World Academy of Science will be awarded in recognition of scientists who have made significant contributions to popularize science and have developed new strategies that serve the popularization of science and technology in developing countries.

Thanks to awards organizers for selecting and inviting me to nominate for these honorable prizes in this particular time which indicate their awareness and following my continuous

DOI: <http://dx.doi.org/10.46889/JRMBR.2021.2204>

efforts in offering significant and innovative contributions to popularize science, development of scientific thought, to the application of science and technology to industry and to human well-being, doing to save the public health integrity and wellbeing of people and presenting an exceptionally model in holding out the duties of scientists in braving situations as happened during COVID-19 crisis.

We're on the jut of things we have not imagined previously. In light of the worldwide shutdown and the numerous healthiness and departure limitations due to the novel COVID-19 widespread and my dedication to supply persistent education to students and the universal society, I am going ahead in a virtual, handy and workable assembly style. I turned to offering my research at webinars to display my expertise in the area of stem cell technology and regenerative medicine. My notion is to show creative and sophisticated viewpoints about possible innovative therapy for COVID-19. The crisis had excited me to create and continue showing online chances and grant my experimental viewpoints published in international journals for the whole throughout the world [1-10]. Due to the lockdown, I choose to harness online conferences from my home office to teach my practical pursuits and advanced tactics and also to give counsel and guide the community and people especially elderly to pursue healthiness instructions, nutrition and physical exercise to reduce the hazard of COVID-19 securely [5,6,11-36].

Amid the pandemic, I received an abundance of requests to present online complete sessions and seminars as a world-class keynote invited speaker, the majority to offer a talk on COVID-19, from all over the world: from San Diego, California, Miami, Florida and New York, USA at the west to Singapore; Seoul, South Korea; Hyderabad, India and Jakarta, Indonesia at the other side of the globe and from Dubai, UAE; Jeddah, Saudi Arabia at the Middle East to London, United kingdom. Paris, France, Berlin, Frankfurt, Germany, Madrid, Spain and Prague, Czech Republic, Helsinki, Finland at Europe.

In 2020-2021, I was awarded eleven certificates of appreciation for the achievement of presenting thirty Global Webinars (36.7%) for outstanding contribution to the commitment to provide continuing education to the international community from my home office amid the lockdown year of COVID-19 crisis [5,11-20]. The Certificates were awarded in appreciation of an eminent University Professor, a globally accredited researcher with major expertise.

Significance of the story is constantly continue with the trust that what you need to obtain is potential whatever the challenging situations; simply pondering out of the box (Creative Thought). It's always possible to overcome tough situations throughout the box believing. In life, you gain what you grant. Our struggles in life develop our strengths. Without fights, we are not ever developed and not ever get powerful, so it's significant for us to tackle challenges. This is an incentive story on the force of practice. Believing you can become successful is the ultimate leading move in effectively realizing it.
