The aim of the journals are publishing novel scientific research articles and research reviews. In this regard *Science* also publishes science-related news, opinions on science policy, other matters of interest to scientists and others who are concerned with the wide implications of science and technology. Furthermore, most of the scientific journals focus on a specific field like, *Science* and its rival *Nature* cover the full range of scientific disciplines.

Now a days Scientific research is very competitive, in this field the searching a articles through different modes is little challenging. To overcome this problem I have tried some of the direct access articles through web, you can use the following web address.
