Dear Editor, we read the publication on "Case report of Zika virus during controlled ovarian hyperstimulation: results from follicular fluid, cumulus cells and oocytes" with a great interest. Filho *et al.* (2019) noted that "*This is the first report in the literature analysing ZIKV in the follicular fluid, cumulus cells, and oocytes.*" Indeed, the identification of the virus in follicular fluid has been mentioned for a long time (Washington *et al.*, 2016; Taitson *et al.*, 2017). In animal model, the existence of the virus in oocytes is already reported (Broughton *et al.*, 2017). Therefore, the report by Filho *et al.* (2019) should not be the first report.

CONFLICT OF INTEREST

None
