README — Replication Materials for *Seeing Is Believing: Voluntary Gender Quotas Change Female Leadership Stereotypes*

What the replication materials contain

- **Data (CSV)**: `chlouba_2025_R&P_replication_data.csv`
  Constituency-level, residualized outcomes and covariates prepared for the event-study analysis described in the paper.
- **Code (R)**: `chlouba_2025_R&P_replication.R`
  Single script that reproduces all tables and figures.

Software and key packages

All analyses are implemented in `R`. The script header lists the full package set; core dependencies include `fixest` (estimation), `dplyr` (data wrangling), `ggplot2`/`ggtext` (plotting). The script uses only relative paths.

How to reproduce

1. Open `R` (or RStudio) and set the working directory.
2. Ensure `chlouba_2025_R&P_replication_data.csv` is in the same directory.
3. Run the code in `chlouba_2025_R&P_replication.R`.
