This folder contains the code used to generate the results in the paper "Misfortune and Mistake: The Financial Conditions and Decision-making Ability of High-Cost Loan Borrowers"

There are four data files and two do-files:

- The data file "raw_choices.dta" contains participants' choices in the experimental tasks

- The data file "CCEI.dta" contains the CCEI measure of violations of FOSD and GARP (F-GARP) in the risk task and the CCEI measure of violation of GARP in the ambiguity task

- The do-file "create_DMQ_pref_measures.do" uses these two data files above to generate the data file "survey_data.dta", the cleaned dataset containing the key variables derived from the survey

- The do-file "analysis.dta" contains the code that generates all the results in the paper
    - It uses the data file "survey_data.dta", several proprietary datasets containing the information about the finances of survey respondents, and the data file "UAS_PaydayLoans.dta" (this last data set contains information about payday loans of participants of the online panel Understanding America (UAS))
    - The proprietary datasets are not available in this folder
