(8) Most or all of the key results were robust.
(7) I found that one or more key results were fragile in a manner that would lead an impartial scholar to substantially discount the value of the original study.
(6) I found that one or more key results were driven by an arbitrary aspect of their analysis.
(5) I found that one or more key results were driven by a technical error.
(4) I found one or more major technical errors, though these didn't change the main results.
(3) I was able to precisely reproduce the main results.
(2) I was able to approximately reproduce the main results.
(1) I was not able to approximately reproduce the main results.
