Borders, Geography, and Oligopoly: Evidence from the Wind Turbine Industry

Data and Code Repository

This directory contains the publically available data and code for the paper "Borders, Geography, and Oligopoly: Evidence from the Wind Turbine Industry" by Cosar, Grieco, and Tintelnot. Some of the data used in this project---specifically the micro-data on German Wind Turbine locations---is proprietary and not included in this repository. However, there are instructions on how to purchase this data from the original source in the data notes. The subdirectories are organized as follows:

- **Data** contains notes on the original data sources and the code used to clean the data and prepare it for use in the analysis.
- **SummaryStatistics** contains code that performs all of the preliminary analysis included in the paper, such as summary statistics and regression discontinuity analysis.
- **EstimationCode** contains the code for the structural model that is the focus of Section 3 and the associated counterfactual analysis.

Additional notes are available inside the subdirectories.
