Instructions for data and code of "External shocks, internal shots: the geography of civil conflicts", N. Berman and M. Couttenier, *The Review of Economics and Statistics*

This version. September 24th 2014.

Prelims. First unzip the folder Data_Code_BC_Restat_2014.zip (required space 445 MB).

Data. The final datasets used in the paper, in Stata 12 format, are available in the folder "Data/Output". It contains several files:

- "data_BC_Restat2014.dta": the main dataset used throughout all the paper, except in Table 14 (appendix of the paper) and A.27 to A.29 (online appendix).
- "trade_crises_ijt.dta" and "trade_crises_it.dta": contain financial crises and trade data, respectively at the country-pair and country levels, used for the regressions of Table 14 and Figure A.7 in the online appendix.
- "To_Append_No_Africa.dta" data on additional – non African – countries used in Tables A.27 and A.28 of the online appendix.
- "FAO_hs4.dta": data on world import of commodities by product used in Table A.29 of the online appendix.

The web appendix of the paper contains information about all variables' sources.

Do-files. The Stata do-files are available in the "Dofiles" folder. To replicate the results of the paper, change the directory in the do-file "0-Master_BC.do" and run it. The log files and tables of results appear in the folder "Results". Each table can also be obtained independently by running the corresponding do-file. For information purposes, the do-files which were used to construct the final datasets from the raw data are also available in the zipped folder named "Construction_do_files.zip".
