Age structure and political violence: A re-assessment of the 'youth bulge' hypothesis

International Interactions, 2018 (GINI-2018-1358)

Instructions for the replication of the findings reported in this article:

1. The data and replication code are in R format (http://www.R-project.org).
The following two files are needed for the analysis:
- 'Weber2018_replication_code.R'
- 'Weber2018_replication_data.RData'.
(The csv-file is not necessary but may help users working in other environments.)

2. Start R (or RStudio) and open the replication code (File – Open file – Weber2018_replication_code.R).

3. Make sure the replication data file ('Weber2018_replication_data.RData') is located in the folder that is specified in line 9 of the code ('C:/data'). Alternatively, change the path in line 9 to direct to the folder on your hard drive where the data file is located (on Mac, this path usually starts with '//').

4. Execute the code (e.g., ctrl-a, then ctrl-enter). Tables and figures will automatically be saved into the folder specified above.
