Project Code: INDU0008
Project Name: Energy Insecurity and COVID - Wave 4
Prepared for: David Konisky
Interviews: 1380
Field Period: May 24, 2021 - June 04, 2021
Project Manager: Sam Luks - 650.462.8009
==========
YouGov interviewed 1380 respondents. The frame was constructed by stratified sampling from the 2017 American Community Survey (ACS) 1-year sample of low income individuals (defined as those whose income is 200% of the Federal Poverty Level or less), with selection within strata by weighted sampling with replacements (using the person weights on the public use file).

The cases were weighted to the sampling frame using propensity scores. The cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and region. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on a four-way stratification of gender, age (4-categories), race (4-categories), education (4- categories), and residence in Indiana to produce the final weight. Because the sample included an oversample of Indiana residents, these respondents were weighted down to the expected proportion of Indiana residents in a national survey.
