Individual Leaders and the State: The Case of Israel as a Complex Adaptive System

Codebook and notes on the data for the games section of the article:

[The unit of analysis in Excel sheet 2 is the individual prime minister.]

Columns A and B: The name of the Israelis Prime Minister

Column C: COW country code, in this case, all are Israel

Column D: The total number of words analyzed to generate the psychological variables.

Columns E-K: The Leadership Trait Analysis variables (see Hermann, 2003). The column titles are the names of the variables.

Columns L-AA: The Operational Code Analysis variables. The column titles are short forms of the variable names. Those beginning with "p" are the philosophical beliefs; those beginning with "i" are the instrumental beliefs (see Schafer and Walker, 2006).

Notes:

1. The raw data for the psychological variables came from the PsyCL Dataset (see Schafer and Lambert, 2022).
