Replication instructions
for
Sandro Ambuehl,
"An experimental test of whether financial incentives constitute undue inducement in decision-making"

Required packages

The Stata scripts require `outreg2`, `egenmore` and `grstyle` which can be installed by typing the following into the Stata command window:

```
ssc install outreg2
ssc install egenmore
ssc install grstyle
ssc install palettes
ssc install colrspace
```

Install `mysureg` by typing the following into the Stata command window:

```
net from http://www.stata-press.com/data/gps/ml3/
net install ml3_ado
ml3_ado
```

`mysureg` must be accessible from within each subfolder that contains a do-file.

Path

In `MASTER_DO_FILE.do`, set line 3 to

```
local cdOriginal = [folder where this replication package is
located on your machine]/REPLICATION_MATERIALS"
```

Running

Run `MASTER_DO_FILE.do`. This file will call up all other scripts in sequence.

The script takes more than an hour to run on a four-core version of Stata MP on a 2020 octocore MacBook Pro.

Output

All output tables and graphs will be saved in the folders writeup/tables and writeup/graphs, respectively. Numbers mentioned in the main text will be displayed in the Stata output window and are marked with the comment "Mentioned in main text" in the Stata do files.
