Deputies' assets and their legislative activity (2023-2025)

This dataset provides empirical support for the research paper "Deputies' assets and their legislative activity (2023-2025)". The study investigates the relationship between wealth concentration among political elites and their performance in the Brazilian National Congress. All information is written in Brazilian Portuguese.

Dataset Content:

The repository is organized into subfolders and includes:

- **Raw Data:** Original files collected from public sources. This includes detailed asset declarations from the Superior Electoral Court (TSE), corporate network data from the Federal Revenue (RFB), legislative proposal data from the Chamber of Deputies' open data portal, and public contract data from the Transparency Portal.
- **Processed Data:** The consolidated and clean dataset in `.csv` format, ready for analysis. It contains variables on legislators' wealth, sociodemographic profile, party affiliation, and legislative activity.
- **Analysis Scripts:** The `R` code used for data processing and aggregation, ensuring the full reproducibility of the processed dataset from the raw data.
- **Data Dictionary/Codebook:** A `PDF` document that provides a detailed description of each variable in all datasets contained in this repository.

Methodology:

Data collection and organization followed a mixed-methods approach, combining the compilation of large-scale electoral and public data with computational social science techniques for processing and analyzing large volumes of information. The full methodology is described in the paper associated with this dataset.
