Data Replication Notes for "US Military Intervention and Elite Communication Frames"

Kerry Chávez[1]

Figures

All figures were generated using R. The R workspace titled "framil" contains the raw speech document frame matrix (dfm), dictionary, and dataset of communication frames after applying the dictionary to the original dfm. Upon opening the R file, load the R workspace and run commands to generate Figures 1, A1, and A2.

Tables

All statistical models were run using Stata 15.1 using the .dta file titled "framil_dataset." To replicate, open the .do file titled "framil_commands," load the data, and run commands to generate the models populating all tables in order as they appear in the article and online appendix.
