Summary of Replication Package for "Interfirm Relationships and Business Performance"

Jing Cai and Adam Szeidl
December 2017

This document describes the contents of the replication package for "Interfirm Relationships and Business Performance" by Jing Cai and Adam Szeidl.

1. interfirm_analysis.do: This do file runs all the analysis and creates all tables and figures in the paper. If needed, please change the directory at the beginning of the file to the folder containing the data files.

2. 120617main.dta: The main data file.

3. 120617attrition.dta: The file containing the sample of firms which attrited, used to calculate summary statistics for these firms (Table A1).

4. 120617outofsample.dta: Survey data for a sample of non-applicant firms. We use these data to compare non-applicants and applicants (Table A2).

5. 120617attrshutdown.dta: Information on attrition and shutdown, used to calculate the attrition and shutdown rate.

6. 120617partner.dta: Data on treated firms' connections with regular and cross group members. Used to compare connections and trust in the regular and the cross groups (Table XI).

7. 120617controlgroup.dta: Data contain artificial groups created in control sample. Used for a specification test of our peer effect analysis (Table A4).
