**READ ME:**

Open the Project folder. In Scripts, open and run “MasterScript” after reading all of the instructions within. These instructions will set the working directory to RezaEshghiEconThesisHaverford2025. Then run the script. This will execute all of the necessary do files.

No intermediate data is used, so the IntermediateData folder is empty. The ProcessingScript generates all necessary results (including those used in the appendix section) so the DataAppendixScripts folder is empty.

The regression tables used in the thesis document were constructed in latex (Overleaf) using the regression output generated from Stata.
