Notes on replication data

I have provided the do-files and data underlying the article titled, "*You're not like us! Ethnic discrimination and national belonging in Nigeria.*" Five files have been provided, each of which are discussed below. The analysis was conducted using STATA 17. Further details on the data are also provided in the respective do-files:

Main data and regression codes

- The file **Pooled_data** contains data appended across Rounds 7 and 8 of the Afrobarometer surveys. All variables required to estimate the regression models have already been created and labelled accordingly.
- The file **Regression_codes** contains the codes required to execute the regression models using the pooled dataset—i.e., **Pooled_data**

Raw data and do-files

- The files **Nigeria_R7_AB_Data_Raw** and **Nigeria_R8_AB_Data_Raw** contain the raw data from Rounds 7 and 8 of the Afrobarometer survey used to develop the pooled data discussed above.
- The file **Codes_sort_raw_data** contains the codes used to sort the raw data from Rounds 7 and 8 to create the variables of interest. Separate sets of codes have been provided for each round. To derive the pooled data, the created variables (after running the codes) will have to be appended across the two rounds.

***Note:** the raw Afrobarometer data and the survey questionnaire are publicly available on Afrobarometer's website: https://www.afrobarometer.org/
