Codebook

Replication data for "Measuring Ethnic Inequality: An Assessment of Extant Cross-National Indices"

Variable name	Description
SEI	Inequality in access to public services by social group, rescaled to range from 0-1 from "v2peapssoc" (original name in V-DEM dataset)
ethg	Ethnic Gini by Alesina et al. (2016), based on Ethnologue
grg	Ethnic Gini by Alesina et al. (2016), based on Geo-Referencing Ethnic Groups
low_ratio	Horizontal inequality measure based on poorest group relative to country mean by Cederman et al. (2013). Renamed from original name "NHIxl".
lbgi1	Ethnic Inequality (BGI) by Houle (2015)
ggini	Group inequality measure by Omoeva et al. (2018).
betweenstd	Between-group inequality by Baldwin and Huber (2010)

All replication analyses (Figures 5-8) are based on the studies' original variables and Stata codes, only replacing the ethnic inequality measure. I refer to these studies for additional variable descriptions.

Note: when running the replication Stata do-file, make sure to have the "worldcoor.dta" file in the same folder, which is necessary to reproduce various figures.
