The ARRIVE guidelines 2.0: author checklist

The ARRIVE Essential 10

These items are the basic minimum to include in a manuscript. Without this information, readers and reviewers cannot assess the reliability of the findings.

Item		Recommendation	Section/line number, or reason for not reporting
Study design	1	For each experiment, provide brief details of study design including: a. The groups being compared, including control groups. If no control group has been used, the rationale should be stated. b. The experimental unit (e.g. a single animal, litter, or cage of animals).	Page 3, line 9 under the heading Animals Page 3, line 9 under the heading Animals
Sample size	2	a. Specify the exact number of experimental units allocated to each group, and the total number in each experiment. Also indicate the total number of animals used. b. Explain how the sample size was decided. Provide details of any *a priori* sample size calculation, if done.	Page 3, first line and nint h line under the heading An imals
Inclusion and exclusion criteria	3	a. Describe any criteria used for including and excluding animals (or experimental units) during the experiment, and data points during the analysis. Specify if these criteria were established *a priori.* If no criteria were set, state this explicitly. b. For each experimental group, report any animals, experimental units or data points not included in the analysis and explain why. If there were no exclusions, state so. c. For each analysis, report the exact value of *n* in each experimental group.	Page 4, lines 1 to 8 under the heading Neurological fu nction score. Page 3, line 9 under the heading Animals
Randomisation	4	a. State whether randomisation was used to allocate experimental units to control and treatment groups. If done, provide the method used to generate the randomisation sequence. b. Describe the strategy used to minimise potential confounders such as the order of treatments and measurements, or animal/cage location. If confounders were not controlled, state this explicitly.	Page 3, line 7 under the heading Animals
Blinding	5	Describe who was aware of the group allocation at the different stages of the experiment (during the allocation, the conduct of the experiment, the outcome assessment, and the data analysis).	Page 4, lines 1 to 8 under the heading Neurological fu nction score.All of pages f ive and six.
Outcome measures	6	a. Clearly define all outcome measures assessed (e.g. cell death, molecular markers, or behavioural changes). b. For hypothesis-testing studies, specify the primary outcome measure, i.e. the outcome measure that was used to determine the sample size.	Page 4, lines 1 to 8 under the heading Neurological fu nction score. Page 4, lines 1 to 8 under the heading Neurological fu nction score.
Statistical methods	7	a. Provide details of the statistical methods used for each analysis, including software used. b. Describe any methods used to assess whether the data met the assumptions of the statistical approach, and what was done if the assumptions were not met.	Page 5, eleventh line under the heading TTC staining Page 5, first to fourth lin es under the heading Statis tical analysis.
Experimental animals	8	a. Provide species-appropriate details of the animals used, including species, strain and substrain, sex, age or developmental stage, and, if relevant, weight. b. Provide further relevant information on the provenance of animals, health/immune status, genetic modification status, genotype, and any previous procedures.	Page 3, first line under th e heading Animals Page 3, first line under th e heading Animals
Experimental procedures	9	For each experimental group, including controls, describe the procedures in enough detail to allow others to replicate them, including: a. What was done, how it was done and what was used. b. When and how often. c. Where (including detail of any acclimatisation periods). d. Why (provide rationale for procedures).	Page 4, lines one through t wenty-three under the headi ng Modeling method. Page 4, lines one through t wenty-three under the headi ng Modeling method. Page 3, second to fourth li nes under the heading Anima ls. Page 4, lines one through t wenty-three under the headi ng Modeling method.
Results	10	For each experiment conducted, including independent replications, report: a. Summary/descriptive statistics for each experimental group, with a measure of variability where applicable (e.g. mean and SD, or median and range). b. If applicable, the effect size with a confidence interval.	Page 6, title This method i mproves the successful effi ciency of model down lines one to eight. Page 5, first to fourth lin es under the heading Statis tical analysis.

The Recommended Set

These items complement the Essential 10 and add important context to the study. Reporting the items in both sets represents best practice.

Item		Recommendation	Section/line number, or reason for not reporting
Abstract	11	Provide an accurate summary of the research objectives, animal species, strain and sex, key methods, principal findings, and study conclusions.	lines 1 to 25 under the heading Abstract.
Background	12	a. Include sufficient scientific background to understand the rationale and context for the study, and explain the experimental approach. b. Explain how the animal species and model used address the scientific objectives and, where appropriate, the relevance to human biology.	Page 1, lines 1 to 6 under the heading Abstract. Page 1, lines 1 to 6 under the heading Abstract.
Objectives	13	Clearly describe the research question, research objectives and, where appropriate, specific hypotheses being tested.	irty-five under the heading Introduction.
Ethical statement	14	Provide the name of the ethical review committee or equivalent that has approved the use of animals in this study, and any relevant licence or protocol numbers (if applicable). If ethical approval was not sought or granted, provide a justification.	Page 3, lines 1 to 4 under the heading Ethical approval.
Housing and husbandry	15	Provide details of housing and husbandry conditions, including any environmental enrichment.	3, lines 7 to 8 under the heading Animals
Animal care and monitoring	16	a. Describe any interventions or steps taken in the experimental protocols to reduce pain, suffering and distress. b. Report any expected or unexpected adverse events. c. Describe the humane endpoints established for the study, the signs that were monitored and the frequency of monitoring. If the study did not have humane endpoints, state this.	Page 4, first to third lines under the heading Preoperative and postoperative care Page 5, first to second line under the heading Recording of modeling, survival time, and weight changes
Interpretation/ scientific implications	17	a. Interpret the results, taking into account the study objectives and hypotheses, current theory and other relevant studies in the literature. b. Comment on the study limitations including potential sources of bias, limitations of the animal model, and imprecision associated with the results.	Page seven page eight page nine, all under the heading Discussion. Page seven page eight page nine, all under the heading Discussion.
Generalisability/ translation	18	Comment on whether, and how, the findings of this study are likely to generalise to other species or experimental conditions, including any relevance to human biology (where appropriate).	Page seven page eight page nine, all under the heading Discussion.
Protocol registration	19	Provide a statement indicating whether a protocol (including the research question, key design features, and analysis plan) was prepared before the study, and if and where this protocol was registered.	Page 1, lines 1 to 6 under the heading Abstract.
Data access	20	Provide a statement describing if and where study data are available.	line under the heading Data availability.
Declaration of interests	21	a. Declare any potential conflicts of interest, including financial and non-financial. If none exist, this should be stated. b. List all funding sources (including grant identifier) and the role of the funder(s) in the design, analysis and reporting of the study.	Page 9, first line under the heading Competing interests. Page 9, lines one to twelve under the heading Grant information.
