Islands, Lake Victoria, Vector Polyline, ~2015

Reference Information and Units:

Projection: African Lambert Conformal Conic

ESRI: 102024 (https://epsg.io/102024)

GCS: GCS_WGS_1984

File Naming Convention:

LV_Islands_Line.shp

Data Origin:

Created from using Shoreline data that was created from manual digitization from open-source imagery

Data Development:

This data was created by extracting all islands from the shoreline poly shapefile by using a combination or Erase, Explode, and delete to leave only internal LV Islands. Next the area of each island was calculated. These are the island polygons. Finally the polygons were converted to lines to form the island lines
