Step-by-step instructions for reproducing the results

1. Create the directory structure as follows:
    a. Create a folder. Name it something, e.g., JEPS_Manipulationchecks_Replicationfiles
    b. Within this folder add the Stata do file: Manipulation_checks_replication_code.do
    c. Download Manipulation_checks_replication_data.dta in the Data folder

2. Open the "Manipulation_checks_replication_code.do" file and set the global main "" path to the folder that you created in step 1a, i.e., path to the JEPS_Manipulationchecks_Replicationfiles.

3. Run Manipulation_checks_replication_code.do in Stata to replicate the Figures and Tables in the main paper and the online appendix.
