Martini, Christina A. and Urueña, Viviana (2022). Can role models influence female's decision to participate in the labor market? Evidence from a field experiment.

Data preparation and analysis executed in STATA 17 and computation of Minimum Detectable Effect sizes in R.

We recommend to use the following folder structure in a folder called “Replication”:

- Code
    - Datacleaning.do (Do-file)
    - Analysis.do (Do-file)
    - Codebook_ques.xlsx
    - Codebook_ques.csv
    - Codebook_exp. xlsx
    - Codebook_exp.csv
- Data
    - processed
    - raw
        - schoolexp.csv
        - schoolexp.dta
        - schoolques.csv
        - schoolques.csv
- Output

The Do-file “Datacleaning.do” generates the cleaned dataset “school_final” (saved in “Data/processed”) that is used for the analysis. The Do-file “Analysis.do” contains all the codes used in the analysis, which – if executed – saves the tables and figures in the folder “Output”.

A description of the variables can be found in the codebooks “Codebook_ques” and “Codebook_exp”.

The survey and experimental instructions of the paper can be found in the Online Appendix of the publication at the Journal of Economic Development and Cultural Change.
