READ ME: An Explanation of the Archived files for the Paper "Citations to the Publications of Male and Female Political Scientists Revisited"

Table 1 in this paper, as explained in the paper, is based on analyses of a data file on political scientists in PhD granting departments in the United States in 2002, a data set collected by Natalie Masuoka, Bernard Grofman, and Scott Feld (for which a full citation is provided in my paper).

This data set for Table 1 is archived here as HillMGFTop400Workfile.sav

The SPSS syntax file to replicate the analyses I report in Table 1 is archived here as MGFTable1.sps

The output from the above syntax file reports the values in Table 1 starting at the top left cell, proceeding across the first row, and then reading from left to right of each successive row to the right-most cell of the last row.

An example of the output from the latter syntax file is archived here as Table1Output.docx.

Table 2 in this paper is based on analyses of a data file on political scientists in PhD granting departments in the United States in 2017, a data set collected by Hannah Kim and Bernard Grofman.

This data set for Table 2 is archived here as KimGrofmanPS400HillWorkFile.sav

The SPSS syntax file to replicate the analyses I report in Table 2 is archived here as KGTable2.sps

The output from the above syntax file reports the values in Table 2 starting at the top left cell, proceeding across the first row, and then reading from left to right of each successive row to the right-most cell of the last row.

An example of the output from the latter syntax file is archived here as Table2Output.docx

I note that Table 3 in my paper is not a product of original empirical analyses. Instead, as explained in the paper, the data there are taken from various reported data in a second paper by Hannah Kim and Bernard Grofman.
