daniela.campello@fgv.br

February 1, 2019

This repository includes data and code to replicate most results in the paper. Specifically, it includes materials to replicate Figure 1 and several statistics about CH's neoliberalism, orthodoxy, and statism indices that are mentioned in the text of the our paper, as well as Tables A.3, A.4, A.5, A.6, and Figure A.2 in the Supplemental Information. Figure A.1 and Tables A.1 and A.2 in the Supplemental Information are identical to results presented in Campello & Zucco Jr. (2016), with the exception of the recoding of Honduras. Hence, we refer interested readers to the replication materials for that paper, which are available at https://doi.org/10.7910/DVN/XG6QQX. Materials to replicate the time series analysis mentioned in the last section of the paper are part of our book project on the topic, and will be released momentarily.

The repository includes four files with data (one of which was provided by Carlin & Hellwig (2019), and two that were identical to files used in Campello & Zucco Jr. (2016)), and three files with code, as follows:

- `lscedefinition.R`: File with R code to generate Figure 1 in the paper.
- `economicvoting.R`: File with R code to generate Tables A3 and A4, as well as Figure A2 As well as Tables A.5 and A.6 in the Supplemental Information.
- `get-neoliberalism.R`: File with R code to generate stats that are mentioned in the text as well as Tables A.5 and A.6 in the Supplemental Information.
- `data_economicvoting.RData` Data file with 337 obs. of 13 variables assembled and computed from the World Development Indicators, Penn World Tables, Dataset of Political Institutions, and from the Archiagos Dataset. The unit of analysis here is country/election.
  - `year`: Year of the election
  - `code`: Country WB code
  - `ifs`: Country IFS code
  - `Country`: Country name
  - `country.term`: Country/year indicator
  - `countryname`: Alternative country name
  - `region`: Indicator for whether country is an "Advanced Democracy", or a "Latin American" case

  - `reelect`: 1=Reelection; 0=Non-reelection
  - `tag`: Term average growth rate (based on WDI growth data)
  - `tagsd`: Standardized (relative to country) term average growth rate
  - `tagpenn`: Term average growth rate (based on PWT growth data)
  - `tlyg`: Growth in last year of term (WDI data)
  - `trnetag`: Regional average growth rate in the term, net of the country under consideration

- `data_panel.RData` Data file that was previously used in Campello & Zucco Jr. (2016). See that paper's Supplemental Information for details, sources and definitions
- `data_fundamentals.RData`: Data file with 680 obs. of 13 variables that was previously used in Campello & Zucco Jr. (2016). See that paper's Supplemental Information for details, sources and definitions
- `HC-figure_2.RData`: Data file provided by CH. See Carlin & Hellwig (2019)for definitions and explanations
