V040101 Study.5. Pre-election post-stratified sample weight
==========

STUDY DESCRIPTIVE:

Pre-election sample weight

NOTES:

This is a 6-digit variable with coded decimal point and
4 actual decimal places.
The 2004 NES weights are post-stratified to 2004 CPS March
Supplement proportions for six (6) ages by four (4) education
categories. The post-stratification adjustment is computed by
dividing the CPS weighted total by the 2004 NES total weighted
by the nonresponse adjusted selection weight. .

The final analysis weight is the product of the household
level non-response adjustment factor, the number of eligible
persons, and a person-level post-stratification factor.

TYPE:

Numeric Dec 4

==========
V040102   Study.6. Post-election post-stratified sample weight
==========

STUDY DESCRIPTIVE:

Post-election sample weight

NOTES:

This is a 6-digit variable with coded decimal point and
4 actual decimal places.
The 1,066 Post-Election cases were post-stratified to 2004 CPS
March Supplement proportions for six (6) ages by four (4)
education categories. The post-stratification compensates for
differential non-response by age group and education level.
The panel attrition weight for the Post-Election Study is the
product of the Pre-Election final weight and the post-
stratification factor formed by dividing the CPS proportion by
the weighted NES proportion for each of the 24 age by
education cells. The weight is scaled to sum to the number of
cases, 1066.

Please look at page 2 of the booklet.
I'd like to get your feelings toward some of our political
leaders and other people who are in the news these days. I'll
read the name of a person and I'd like you to rate that
person using something we call the feeling thermometer.
Ratings between 50 degrees and 100 degrees mean
that you feel favorable and warm toward the person.
Ratings between 0 degrees and 50 degrees mean that you
don't feel favorable toward the person and that you
don't care too much for that person. You would
rate the person at the 50 degree mark if you don't feel
particularly warm or cold toward the person.
If we come to a person whose name you don't recognize, you
don't need to rate that person. Just tell me and we'll move on
to the next one.

            N5. INTRO GUARANTEED JOBS-STANDARD LIVING SCALE
================================================================================

Please look at page 9 of the booklet.
Some people feel the government in Washington should see
to it that every person has a job and a good standard of
living. Suppose these people are at one end of a scale,
at point 1. Others think the government should just let
each person get ahead on their own. Suppose these people
are at the other end, at point 7. And, of course, some
other people have opinions somewhere in between, at
points 2, 3, 4, 5, or 6.

P3. INTRO ENVIRONMENT-JOBS TRADEOFF SCALE
==========

Please look at page 11 of the booklet
Some people think it is important to protect the environment
even if it costs some jobs or otherwise reduces our standard
of living. (Suppose these people are at one end of the
scale, at point number 1) Other people think that
protecting the environment is not as important as
maintaining jobs and our standard of living. (Suppose
these people are at the other end of the scale, at point
number 7. And of course, some other people have
opinions somewhere in between, at points 2, 3, 4, 5, or 6).

VALID CODES:

1. Someone IN ADDITION TO RESPONDENT is age 14 or older in household
5. NO ONE OTHER THAN RESPONDENT is age 14 or older in household
8. Coding error by Interviewer; R indicated as married/ partnered in Y2x, but coded in Y20 for R only person age 14+
9. Coding error by Interviewer; person in household listing other than R or spouse/partner who is age 14 or older, but coded for R only person age 14+

NOTES:

Coded by interviewer for income questions: households with more than 1 person earning income are asked both family income

and respondent income.
Some spouses/partners were not in the respondent's household
due to residence in nursing home or due to military service
etc. If R indicated married/partnered in Y2x then 1 is coded
here, even if spouse/partner is not included in household
listing. Code 8 corresponds to cases where IWR omitted
counting a spouse/partner.
Code 9 corresponds to cases where no spouse/partner is
indicated in Y2x and where household listing (see Y20x)
indicated at least one other person besides R who was aged
14 or older, but interviewer miscoded Y20 to indicate
that R was the only person aged 14 or older. (If however,
all other persons in HH were indicated as roommates, then 1
has been coded; in all cases but 1 of code 9, however, the
other persons in household were identified as family
members). For cases coded 8 or 9, only R's individual income
has been determined (Y21b); total household income
(Y21a/Y21x) was not asked.

roommate income is not counted as family income.

NOTES:
------
D1h-D1p Senate thermometers were administered in randomized
order after the administration of thermometers for President
Bush (D1a), Presidential candidates John Kerry and Ralph
Nader (D1b, D1c), and House thermometers (D1d-g).
This variable identifies the thermometer for senator with term
not up (state with race) as administered as the nth
thermometer name in the set of 6 Senate thermometers D1h-D1p.
Note: every case was assigned a randomized order for Senate
Democratic candidate, Senate Republican candidate, Senate 3rd-
party/independent candidate, Senator #1, Senator #2, and
Senator with term not up.
If there was no Democratic candidate/Republican candidate/
3rd-party or independent candidate/Senator #1/Senator#1/
Senator with term not up, the order was still assigned but the
relevant question was skipped in the assigned  place.  This
represents the assigned order.

In general, House incumbents in this file have been regarded
as candidates (already) in office representing a district,
where district is regarded as a geographic rather than a
political unit, at the time of the 2004 election. The extent
of the Texas redistricting prior to the 2004 election produced
House races with incumbents running in areas where he or she
had provided little or no prior representation, thus no
Texas candidate has been identified as a true incumbent
(running or retiring) for the new districts.

MISSING CODES:

INAP. no incumbent candidate in 2004 House race; Texas;

NOTES:

In general, House incumbents in this file have been regarded
as candidates (already) in office representing a district,
where district is regarded as a geographic rather than a
political unit, at the time of the 2004 election. The extent
of the Texas redistricting prior to the 2004 election produced
House races with incumbents running in areas where he or she
had provided little or no prior representation, thus no
Texas candidate has been identified as a true incumbent
(running or retiring) for the new districts.

            D1. INTRO POLITICAL FIGURE THERMOMETERS
==========

Please look at page 2 of the booklet.
I'd like to get your feelings toward some of our political
leaders and other people who are in the news these days.

I'll read the name of a person and I'd like you to rate that
person using something we call the feeling thermometer.
Ratings between 50 degrees and 100 degrees mean that you feel
favorable and warm toward the person. Ratings between 0

degrees and 50 degrees mean that you don't feel favorable
toward the person and that you don't care too much for that
person. You would rate the person at the 50 degree mark if you
don't feel particularly warm or cold toward the person.

If we come to a person whose name you don't recognize, you
don't need to rate that person. Just tell me and
we'll move on to the next one.

Please look at page 8 of the booklet.
Some people feel that the government in Washington should make
every effort to improve the social and economic position of
Hispanic-Americans. Suppose these people are at one end of a
scale, at point 1.
Others feel that the government should not make any special
effort to help Hispanic-Americans because they should help
themselves. Suppose these people are at the other end, at
point 7.
And, of course, some other people have opinions somewhere in
between, at points 2, 3, 4, 5, or 6.

Now I have some questions about different groups in our
society. I'm going to show you a seven-point scale on which
the characteristics of the people in a group can be rated.

In the first statement a score of 1 means that you think
almost all of the people in that group tend to be
"hard-working." A score of 7 means that you think most
people in the group are "lazy." A score of 4 means that you
think that most people in the group are not closer to one end
```

POST-ELECTION SURVEY:

QUESTION:
---------
Please turn to page 16 of the booklet.
I'd like to know what you think about each of our political
parties. After I read the name of a political party, please
rate it on a scale from 0 to 10, where 0 means you strongly
dislike that party and 10 means that you strongly like that
party.
If I come to a party you haven't heard of or you feel you do
not know enough about, just say so.
